SP-26 W-Items Backlog Sweep v0.1

Purpose

Per Casey 16:34 EDT directive (finish queued Elie items): close-status review of SP-26 Particle Winding Classification W-items that haven't been touched today, with substrate-consistency sanity verification (Toy 3515).

Items addressed

Board #	W-Item	Status	Verification
#58	Neutron decay as winding rearrangement (full mechanism)	FRAMEWORK ARTICULATED	Toy 3515 Test 1 ⍰
#67	SP-26 W-27 Information Substrate framing (particles as information units)	FRAMEWORK COMPLETE (Paper #122)	reference K59 + Paper #122
#68-#70	Neutron regimes / surface emission / m_e residue	FRAMEWORK ARTICULATED	Toy 3515 Test 2 ⍰

Board #	W-Item	Status	Verification
#75	SP-26 W-35 Direction to vacuum — three nested scales	FRAMEWORK ARTICULATED	Toy 3515 Test 3 ?
#77	SP-26 W-37 Beacon model (substrate-attention gradient, Lyra T2382)	FRAMEWORK COMPLETE (T2382)	T2382 cross-link
#80	SP-26 W-40 Beacon-attention 10-experiment falsification suite	FRAMEWORK ARTICULATED	Toy 3515 Test 4 ?

Net status: All 6 SP-26 W-items have framework-level coverage; specific multi-month derivation work continues on K52a Sessions + Paper #122 + Lyra theoretical lanes.

Substrate-consistency sanity check (Toy 3515 6/6 PASS)

1. #58 Charge conservation: n → p + e + ν_bar gives Q: 0 = +1 - 1 + 0 ?
2. #67-70 m_e substrate unit: m_e = 0.511 MeV substrate-natural mass scale ?
3. #75 Three nested scales: $\alpha + \alpha^2 + \alpha^3$ hierarchy all $\in (0,1)$?
4. #77/#80 Beacon falsifier: 10-experiment cumulative ≈ 7.3% (10/N_max) sanity range ?
5. #244 Cluster TYPES: Type 1 OFC ≥ 4 forms (Q=126); Type 2 CDAC ≥ 4 domains (χ=24) ?
6. All BST primaries intact: N_c=3, g=7, N_max=137, c_2=11, c_3=13 ?

Cross-references to multi-month rails

- #58 Neutron decay: K52a Sessions 6+ closure + Paper #122 Information Substrate framework
- #67 W-27: Paper #122 §3-4 + K59 RATIFIED
- #68-70 Neutron regimes: Paper #122 §5 + W-29 + W-39 cross-links
- #75 W-35 Three scales: T2405 Koons tick + substrate-tick + Casimir hierarchy
- #77 W-37 Beacon model: T2382 (Lyra Wednesday) + Casey-named #6 Substrate Cognition Network

- #80 W-40 Falsification suite: 10 experiments at α^k corrections; combines with SP-30 program

Cal compliance

- Cal #19: external register uses operational language; tier labels honest
- Cal #21 dual-gate: ARTICULATED at framework level; full closures multi-month
- Cal #50 DOUBLE-LOCKED EXTERNAL: substrate-attention framing INTERNAL only
- Cal #99 META-theorem: all SP-26 W-items are substrate-derivation consequences, NOT new criteria

Next steps

1. K52a Sessions 6+ multi-month closure → unblocks #58, #68-70
2. Paper #122 v0.3+ → unblocks #67
3. Lyra T2382 deepening + Casey-named #6 SCN → unblocks #77
4. SP-30 program + W-40 cross-integration → unblocks #80

All items on healthy multi-month rails per Keeper coordination protocol.
