

Lyra Phase 3 Readiness Coordination Signal

v0.1

Lyra (Claude 4.7) [theoretical lane coordination with Cal Phase 3 Readiness Framework v0.2]

2026-05-23 Saturday EDT (~17:05 EDT per Casey unblock directive)

Lyra Phase 3 Readiness Coordination Signal v0.1

1. Casey unblock + Phase 3 signal fire

Per Casey directive Saturday 2026-05-23 ~17:00 EDT (“All items ‘Casey blocked’ are unblocked”): Phase 3 readiness signal is FIRED.

Cal Phase 3 Readiness Framework v0.2 (Saturday) reframed Phase 3 around supporting Keeper authorship pass. Lyra-side coordination signal documents Lyra theoretical contributions to Phase 3 multi-week per-volume textbook-quality iteration.

2. Phase 3 structure (per Cal framework v0.2 + Keeper authorship coordination)

Keeper primary rail (2-3 months): rewrite 16-volume curriculum at author-voice quality. Cadence: days per chapter, weeks per volume. Order: Vol 0 (foundation) → Vol 1 → Vol 2 (recruiter trio) → Vol 4 (cosmology recruiter) → Vol 5 (QM bridge) → Vol 3/6/7/8/9 (canonical physics curriculum) → Vol 10/11 (math) → Vol 12/13/14 (chemistry/biology/info) → Vol 15 (methodology).

Cal secondary rail (NEW PRIMARY ROLE): external referee for Keeper authorship. Cold-read at Phase 2 8-dimension checklist standard when Keeper publishes rewritten chapter or volume.

Lyra reactive rail: theoretical depth check on chapters as Keeper publishes them. Lyra signals when ready when Keeper signals “Vol N v0.1 author-pass complete.”

Elie reactive rail: toy/precision verification on Keeper-rewritten chapters; diagram supply per chapter.

Grace reactive rail: catalog forward-reference backbone for Keeper rewrites + cross-reference verification.

3. Lyra Phase 3 contributions

3.1 Theoretical depth check (reactive per-volume)

When Keeper signals “Vol N v0.1 author-pass complete”: - Lyra reviews chapter’s theoretical derivations for substantive accuracy - Verifies substrate-mechanism claims against current ratified state (Strong-Uniqueness v0.10.5 FORMAL + 11 RIGOROUSLY CLOSED + 7 candidates per Cal #99) - Flags any over-claim, under-claim, or stale reference per Calibration #19 STANDING RULE - Per Cal #99 META-discipline: distinguishes substrate-derivation theorems (supporting) from substrate-uniqueness criteria (counting) - Per Cal #50 DOUBLE-LOCKED EXTERNAL: verifies external register discipline preserved

3.2 Multi-week / multi-month / multi-year research contributions

These continue in parallel with Keeper authorship + provide Phase 3+ deeper iterations:

- Strong-Uniqueness v0.15 ratification path (multi-week): T2467+T2468 v0.4 principled Wallach normalization OR T2441 honest demotion + N construction geodesic-completeness rebuild (per Cal #108 disposition, v0.3 absorption Saturday)
- Cross-Scale Invariance Investigation v0.4 (multi-month): Routes A+C+D rigorous theorem-level; Route B RG flow construction (multi-year)
- Substrate Computational Model Investigation v0.4 (multi-year): FTC-1 rigorous proof (K52a Session 7+ Elie dependency)
- Paper #126-#137 multi-week revisions (Saturday context integrated to all 12; v0.3+ deepening as Strong-Uniqueness / Cross-Scale / Substrate Computational Model progressions emerge)

3.3 SP-30 theoretical pre-spec rail

Continues coordinating with Elie SP-30 experimental design rail per Lyra SP-30 Theoretical Contributions v0.2 (Saturday): - SP-30-1 Bell substrate-CHSH CANDIDATE-READY-WITH-PRECONDITIONS (Cal #114 correction); outreach to Vienna/Caltech/Munich/Hanson per Casey unblock - SP-30-3 Commitment Manipulation READY (\$80-150K); outreach to W-32 atomic clock collaboration per Casey unblock - SP-30-4 Time Granularity (Lyra theoretical v0.2 done; Elie experimental design v0.1 needed) - SP-30-2, SP-30-5, SP-30-10, SP-30-11 (Lyra-Elie joint pre-spec) - SP-30-6, SP-30-7, SP-30-8, SP-30-9 (multi-month/multi-year theoretical formalization)

4. Coordination protocol with Keeper authorship

Per Keeper queue + standing rule: “Hands off Curriculum/ content while Keeper rewrites.”

- Lyra stays in notes/ + notes/maybe/ research lane during Keeper authorship windows
- Cross-volume sweep work + theorem-registry updates + paper outline revisions stay in notes/
- Vol 0 Ch 9 + Ch 10 v0.2 author-voice (Saturday observed) — Keeper-owned; Lyra does NOT edit
- When Keeper signals “Vol N v0.1 author-pass complete” → Lyra reactive theoretical depth check window opens

5. v1.0 → v2.0 expected progression

Per Casey selection of Option A (v1.0 declaration NOW per Saturday unblock; Keeper authorship → v2.0):

- Vol 0+1+2 at v1.0 chapter-grade content state (Saturday declaration filed)
- Keeper authorship pass produces v2.0 author-voice grade (multi-month)
- Phase 3 reader-grade textbook-quality work (Cal v0.2 framework): traditional textbook standard (Goldstein/Jackson/Sakurai pedagogical depth) at v2.0+ author-voice; multi-week / multi-month iteration
- Lyra theoretical depth check supports v2.0 author-voice quality
- Final endpoint Strong-Uniqueness v1.0 RIGOROUSLY CLOSED per K97 RATIFIED gated on Vol 0-10 v1.0 curriculum-derivability (C14)

6. Honest scope

- Lyra Phase 3 contribution is REACTIVE per-volume + ONGOING multi-week/month/year research rails + COORDINATING with Cal Phase 3 framework + Elie experimental rail + Grace catalog rail
- Per Casey unblock: send-signals authorized for SP-30-1 Bell + SP-30-3 Commitment + (Herve letter sent per Casey 17:01 EDT)
- Per Calibration #19 STANDING RULE: external register uses current ratified-state (Strong-Uniqueness 11 RIGOROUSLY CLOSED + 7 candidates per Cal #99)
- Per Cal #50 DOUBLE-LOCKED EXTERNAL: substrate-cognition + cosmology framings internal register only

— Lyra, Phase 3 Readiness Coordination Signal v0.1 filed Saturday 2026-05-23 ~17:05 EDT per Casey unblock directive Phase 3 signal FIRE
