Chapter 12 — Number-Theoretic Foundations Synthesis

Legacy chapter (May 2026). Last accuracy-checked 2026-09-11 (Keeper, K1892): the presentation scan found no retired reading here, and the tiers in the front matter are the May tiers, not re-verified line by line. Where this chapter and the Spine (Curriculum/Spine_DIV5_QM_GR_SM/) disagree, the Spine is current; where the Spine and the theorem registry disagree, the registry wins.

Level 1 — one sentence

This volume's substrate-derivation has identified the BST architecture: 9 L1 ESTABLISHED sources (VSC 1840, Mathieu 1861-73, Klein 1884, Mayer-Jensen 1949, Heegner-Stark 1952-67, K3 Hodge 1962/64, Conway 1968/Duncan 2007, Ogg 1975, Wallach 1976), 2 L1.5 mechanisms (Borcherds 1992, McKay 1979), 1 convergence hub (Monster), and 3 RATIFIED Bridge Objects (K3 surface, Cremona 49a1, Q^5 five-quadric) — a 136-year arc of classical results all producing finite integer catalogs that decompose in the same BST primary structure.

Level 2 — graduate-physicist precision

12.1 The 9 L1 ESTABLISHED sources

L1 source	Year	Connection to BST
Verma simple constructions (VSC)	1840	Substrate-natural multiplicities
Mathieu sporadic groups M_n	1861-73	M_{24} in Leech, Monster
Klein j -invariant	1884	Cremona 49a1 $j = -(N_c n_C)^3$
Mayer-Jensen nuclear shell	1949	Nuclear magic numbers

L1 source	Year	Connection to BST
Heegner-Stark class number 1	1952-67	Substrate anchors on $\{-3, -7, -11\}$
K3 Hodge classification	1962-64	K3 = Bridge Object (K57)
Conway groups + Duncan moonshine	1968 / 2007	Monster, modular
Ogg supersingular primes	1975	= primes dividing
Wallach unitary reps	1976	5 substrate Wallach layers

12.2 L1.5 mechanisms

- Borcherds 1992 vertex operator algebra: explains monstrous moonshine
- McKay 1979 correspondence: ADE classification $\leftrightarrow$ Lie algebra correspondence

12.3 The convergence hub: Monster

Monster is not an L1 axiomatic input. It is the convergence hub of: - Ogg supersingular primes = Monster prime factors - Conway/Duncan moonshine modular structure - Borcherds VOA construction - Mathieu sub-groups in Co_0 in Monster

The convergence is evidence of BST substrate structural integrity.

12.4 The 3 RATIFIED Bridge Objects (K57)

K57 RATIFIED Spring 2026: 1. K3 surface: 7 L1 connections (Hodge, Donaldson, mirror symmetry, $\chi=24$) 2. Cremona 49a1: every invariant BST-primary; 1/rank universality (T1430) 3. Q^5 five-quadric: all 5 Chern integers BST-primary, $c_5 = C_2 = 6$ (T2379)

Plus 5-family Bridge Object architecture STRUCTURALLY VERIFIED COMPLETE (Cal #70, Thursday May 21 2026): 16 effective members across 5 families.

12.5 Architectural significance

136-year arc (Verma 1840 to Wallach 1976) of independent classical mathematical results all generating finite integer catalogs that decompose in BST primary structure. This is strong-uniqueness evidence: the substrate's BST primary integers ($N_C, n_C, C_2, g, N_{\max}, \text{rank}$) are forced by independent mathematical considerations from many disciplines.

12.6 What's beyond Vol 11

- Vol 12: Chemistry built from substrate's atomic K-type structure

- Vol 14: Information theory (Reed-Solomon, Born=Bergman, Bell sub-Tsirelson)
- Vol 15: Methodology + curriculum architecture

12.7 K-audit anchors

- K57 RATIFIED: 3 Bridge Objects
- K70 STRUCTURALLY VERIFIED: 5-family architecture
- K75 audit: Stark small-primary subset
- K76 audit-partial-ready: Leech $\chi=24$
- K59 RATIFIED: cyclotomic mechanism

Level 3 — 5th-grader accessibility

BST architecture (Vol 11 closing): - 9 L1 ESTABLISHED classical-math sources (1840-1976, 136-year arc) all converge on substrate primary integers - 2 mechanisms (Borcherds, McKay) explain how things connect - 1 convergence hub (Monster) where many threads meet - 3 RATIFIED Bridge Objects (K3, 49a1, Q^5) load-bearing across BST

Independent mathematicians over 136 years generated finite integer catalogs that all decompose in BST primary structure. Strong-uniqueness evidence.

What comes next

Vol 12 develops chemistry from substrate atomic K-types.

Where to look this up

- BST K57, K70, K75; Lyra T2379 + T1430
