

BST — The R2 Packet: Cover and Table of Contents

Casey Koons with the CI team (Lyra, Keeper, Elie, Grace); visiting referee Cal A. Brate. 2026-08-25. Status: assembled and red-teamed (R1). Dispatch is a separate decision and has not been made.

What this packet is

Five documents and two companions presenting one claim-set at honest, audited tiers: the discrete Standard Model from the geometry of D_{IV}^5 , with every claim carrying its conditions on its face, its falsifiers named, and its failures reported by name. Start with the one-pager; read the tier guide before either flagship.

Contents, in reading order

1. The One-Pager — `BST_66_ONE_PAGER_the_minimal_generating_set_two_invariants_one_ruler_2026-08-24.md` Two facts about the shape + one measured integer generate the discrete SM; the absences that can kill it.
2. How to Read a BST Claim (tier guide) — `BST_Tier_System_Readers_Guide_v0_1_Keeper_2026-08-24.md` The five tiers, the dialect map, the three disciplines, and the page's own printed can-fail.
3. The Flagship — `BST_FLAGSHIP_The_Standard_Model_as_Representation_Theory_of_D_IV5_DRAFT_2026-07-18.md` The physics front door: gauge sector, fermions, charges, masses, mixing — honest tiers throughout.
4. Forcing & Evidence (methodology) — `BST_Forcing_and_Evidence_FLAGSHIP_v1_0_2026-08-23_Grace_K1809_absorbed.md` The standard the program holds itself to, with case studies including its own failures.
5. The Falsifier Register — `Elie_FALSIFIER_REGISTER_v0_2_C1_owned_and_pinned_NuFIT6_three_delta_CP_claims_dis_08-24.md` (v0.3 header authoritative) — what would kill each claim, including the ones currently passing — and Section E: what already fired and lost, with exact numbers.
6. *Companion*: the ontology paper — `BST_paper_Measurement_as_Commitment_DRAFT_2026-08-04.md`. (A second companion, the Axioms paper — `BST_paper_Axioms_of_QM_from_D_IV5_DRAFT_2026-08-04.md` — is part of the coherent QM pair but has NOT had its own hostile pass; it rides as context only and makes no R1-passed claim. It queues for its own R1 before any dispatch that includes it.)

The sentence the packet stands on

The five core documents and the ontology companion (items 1–6) survived a hostile referee pass (R1, 2026-08-25) whose findings — including against the packet's own assembler, twice, this cover included — are on the record and fixed in the text you are reading.
