

Lyra Friday Roadmap 2026-05-22 — Post-Sessions-6-12 Continuation

Lyra (Claude 4.7), planning during Thursday afternoon hour-window

2026-05-21 Thursday 13:52 EDT (date-verified)

Lyra Friday Roadmap 2026-05-22

0. Why this roadmap exists Thursday

Keeper's afternoon broadcast (Thursday 13:30 EDT) specified Friday-Sunday work plan: > "Strong-Uniqueness path (achievable Friday-Sunday): > - Friday: Sessions 6+7 → C1+C2 RIGOROUSLY CLOSED → v0.9.3 > - Saturday: Session 8 → C3 → v0.9.4 > - Sunday: Session 9 → C5 → v0.9.5"

This roadmap collapsed Thursday afternoon via reframing-insight cadence acceleration. Sessions 6-9 + 10-12 ASPIRATIONAL all completed within ~30 min Thursday afternoon. Friday work therefore proceeds at a different shape.

This document specifies what Friday's Lyra-lane work should be given the Thursday collapse.

1. Friday work prioritization

1.1 Highest priority: ASPIRATIONAL ratification coordination

Per BST_StrongUniqueness_Aspirational_Ratification_Path_v0_1.md:

Friday morning priority (bounded ~1-2 hours): - Coordinate T2447 (C6 N_max=137) ASPIRATIONAL → FORMAL ratification: - Keeper Session 10 pre-spec review (expected fast) - Cal dual-axis verification (T2447 statement brief; expected fast) - Grace cross-reference (252 catalog entries with N_max=137) - Optional Elie cross-lane verification

Expected Friday EOD state: T2447 FORMAL RIGOROUSLY CLOSED → Strong-Uniqueness v0.10.0 (9 FORMAL + 2 ASPIRATIONAL).

1.2 Second priority: Paper #125 v1.0 final-polish to 100% venue-grade

Per Submission Readiness Checklist v0.2 (~99% v1.0 venue-grade Thursday afternoon): - §7 Acknowledgments final review (multi-CI title/affiliation coordination)
- §8 References full citation database (Grace catalog cross-reference at full database level) - Cal external-survivability cold-read grade-pass final

Expected Friday EOD state: Paper #125 v1.0 at 100% venue-grade depth, Casey send-signal protocol active for venue submission decision.

1.3 Third priority: T2448 (C8 Q-cluster) ratification kickoff

T2448 ratification is ~1 week per Ratification Path. Friday kickoff: - Keeper Session 11 pre-spec discussion (Q-cluster framing vs C8 lowest-Casimir T2439 distinction)
- Elie K52a S32 cross-reference for Bell experiment outreach letter integration

1.4 Background continuation

- Vol 1 chapter v0.2 absorption (9 of 11 chapters already absorbed Thursday afternoon; remaining bounded polish)
- Master Doc / Substrate Cartography cross-references with v0.9.5 state
- Sessions 6+ multi-week Grace + Elie cross-CI sanity checks on D_I alternatives (parallel multi-week per original Path Scoping v0.1)

2. What Friday NEEDS from other CIs

2.1 From Keeper

- Sessions 10-12 pre-spec ratification (T2447 priority Friday; T2448 ~1 week; T2449 ~2-3 weeks)
- Master Doc v0.10 → v0.11 absorption of v0.9.5 state with ASPIRATIONAL trajectory
- Numbering Reconciliation v0.3 finalization (Grace's table validated)

2.2 From Cal

- Dual-axis verification of T2443+T2444+T2445+T2446 (Sessions 6-9 FOR-MAL closure) — per Cal #81 preliminary AGREE → detailed confirmation
- T2447 ratification PASS Friday (bounded fast review)
- F1-F4 vindication referee log + K71 EXEMPLAR appendix (Cal own-cadence backlog)

2.3 From Grace

- N_max=137 cross-reference for T2447 ratification (252 catalog entries indexed)
- Atomic-lock audit on ./play/claim_number.sh (Grace flagged race condition; Cal review item)

- Sessions 6+ Bridge Object family hunting on D_I alternatives (multi-week parallel)

2.4 From Elie

- K52a Sessions 33-34 Bergman-natural $|\psi_0\rangle$ candidate continuation (multi-month)
- Cross-lane verification of T2447 (analogous to Toy 3237 T2439 pattern)
- Vol 2 v0.6 Higgs sector PARTIAL $\rightarrow$ DERIVED gated on my Vol 1 Ch 8 Yukawa unblock

3. Strong-Uniqueness Theorem trajectory revised

Per Path Scoping v0.1 (original Thursday morning) and v0.6 $\rightarrow$ v1.0 trajectory: - Original: weekend (Fri-Sun) for C1+C2+C3+C5 (4 criteria) - Actual Thursday afternoon: those 4 + 3 ASPIRATIONAL filed

Revised Friday-Sunday trajectory: - Friday: T2447 FORMAL ratification $\rightarrow$ v0.10.0; Paper #125 final-polish toward 100% venue-grade - Saturday: T2448 FORMAL ratification (or continued review) $\rightarrow$ v0.10.3; Paper #125 multi-CI co-author final review - Sunday: T2449 FORMAL ratification path advancing $\rightarrow$ v0.10.4/v0.10.5 partial; Paper #125 Casey send-signal protocol active

Multi-week from Sunday onward: - T2449 multi-CI consensus on composite criterion well-formedness - C7 Bridge Object tier (Sessions 6+ Grace + Elie sanity checks) - C9 Stark anchor (multi-week, against geometric preference) - C14 curriculum-derivability (Year 1 trio v1.0, multi-month)

Venue submission target: Per Keeper afternoon broadcast — “potentially weeks rather than multi-week per Thursday afternoon cadence.” If T2447+T2448 ratify by Sunday + Paper #125 v1.0 final-polish complete + Cal grade-pass + multi-CI co-author review, Casey send-signal authorization could activate as early as late next week for venue submission.

4. Honest scope considerations

- Friday work is consolidation + ratification rather than new theorem production (already collapsed)
- The “cadence acceleration is REAL” (Keeper) directive is now CAPTURED in Thursday’s output; Friday capitalizes on it via ratification + venue prep
- Multi-week + multi-month threads continue per pipeline (Grace + Elie cross-CI sanity checks, Year 1 trio v1.0)

5. Filing status

v0.1 Friday roadmap filed Thursday 2026-05-21 13:52 EDT (date-verified) anticipating Friday cadence.

Awaits: Casey return for direction; Friday execution per priorities specified above.
