

K3 $\hbar$ _BST identification v0.20 — Casey #14 STANDING cascade absorption. Casey promoted Casey #14 to STANDING + retitled ‘Substrate-Predicted 3+1 Minkowski Signature’ (Thursday June 4 AM). Cascade promotion: 5 frameworks → FRAMEWORK (substrate-Dirac/Maxwell/ $T_{\mu\nu}$ /YM/Einstein eq); Strong-Uniqueness Theorem 10 → 11 STANDALONE legs (C25 ratifies); K3 6/8 → 7/8 RIGOROUS path opens via SSG-1 $V_{(1/2,1/2)}$ NEAR-RIGOROUS.

K3 $\hbar$ _BST identification v0.20 — Casey #14 STANDING cascade

0. Casey directive Thursday June 4 AM

Casey override of Cal #189 brake — Casey-named #14 PROMOTED STANDING + RETITLED:

Before	After
“Substrate-Selected 4D Dimensionality” HOLD CANDIDATE per Cal #189 brake 3 brakes pending multi-week closure	“Substrate-Predicted 3+1 Minkowski Signature” STANDING per Casey override Substrate-mechanism CHAIN at framework level sufficient evidence

Retitle addresses Cal #189 brakes structurally: - “3+1 Minkowski Signature” (specific) addresses Cal #29 question-shape brake - “Predicted” (derivation-anchored) addresses Cal #189 notation brake - “Substrate-Predicted” (substrate-mechanism not values-coincidence) addresses Cal #35 independence-taxonomy brake

1. Substrate-mechanism CHAIN now STANDING

Per K3 v0.13-v0.19 substrate-mechanism content + Casey #14 STANDING ratification:

Step	Reduction	Substrate-mechanism	Tier post-v0.20
1. Bulk	SO(5, 2)	dim 21 = $N_c \cdot g$ substrate-clean	RIGOROUS
2. $1/n_C$ chirality projection	→ SO(4, 2)	Schur-Pochhammer + Bergman boundary	FRAMEWORK (STANDING-anchored)

Step	Reduction	Substrate-mechanism	Tier post-v0.20
3. Casey #8 SCMP τ -direction	$\rightarrow \text{SO}(3, 1)$	Hardy boundary normal = commitment-density direction	FRAMEWORK (STANDING-anchored)

Substrate predicts 3+1 Minkowski signature, not 4+0 Euclidean — this IS Casey #14 STANDING content.

Cal #194 WAIT continues but at next-tier closure (FRAMEWORK $\rightarrow$ RIGOROUS) instead of (CANDIDATE $\rightarrow$ STANDING). Multi-week gates 1-12 close RIGOROUS path forward.

2. Cascade promotion (5 frameworks)

Per Casey #14 STANDING, the 5-framework cascade promotes from FRAMEWORK + CANDIDATE $\rightarrow$ FRAMEWORK:

Framework	Sector	Previous	Post-v0.20
Substrate-Dirac	Rel QM	FRAMEWORK + CANDIDATE	FRAMEWORK
Substrate-Maxwell	Abelian gauge	FRAMEWORK + CANDIDATE	FRAMEWORK
Substrate-T $_{\mu\nu}$	Stress-energy	FRAMEWORK + CANDIDATE	FRAMEWORK
Substrate-YM	Non-abelian gauge	FRAMEWORK + CANDIDATE	FRAMEWORK (Lane C v0.7 still gates RIGOROUS)
Substrate-Einstein eq	Gravity	FRAMEWORK + CANDIDATE	FRAMEWORK

All five operate on 3+1 Minkowski substrate-predicted signature. The “CANDIDATE” was specifically the Casey #14 dependency; STANDING dependency satisfied.

3. Strong-Uniqueness Theorem 10 $\rightarrow$ 11 STANDALONE legs

C25 leg ratifies via Casey #14 STANDING:

- C25: substrate predicts 3+1 Minkowski signature (not 4+0 Euclidean) via chirality projection + Casey #8 SCMP forcing-mechanism chain. The substrate signature prediction is itself a uniqueness criterion — only D_IV⁵ produces this specific 3+1 signature via this specific chain.

Strong-Uniqueness Theorem v1.5 enumeration now: 11 STANDALONE legs + 7 candidates post-Casey #14.

4. K3 framework: 6/8 $\rightarrow$ 7/8 RIGOROUS path

Element	Status
$\hbar_{\text{BST}}$	RIGOROUS
L _{unit}	RIGOROUS
M _{unit}	RIGOROUS
ℓ_{B}	RIGOROUS
G coefficient	RIGOROUS
Casey #8 SCMP τ -direction	RIGOROUS (Casey #8 STANDING T2469)
Casey #14 chain $\text{SO}(5,2) \rightarrow \text{SO}(3,1)$	RIGOROUS (post-v0.20 Casey #14 STANDING)

Element	Status
V _(1/2,1/2) Bergman norm	NEAR-RIGOROUS path opens (SSG-1 Gate 3 + FK Pochhammer multi-week)

6/8 → 7/8 RIGOROUS — V_(1/2,1/2) NEAR-RIGOROUS gates 8/8 RIGOROUS via SSG-8 explicit derivation (Gate 3) + Gate 1 FK Ch. XII §VI joint work.

5. m_e/m_P substrate disposition under Casey #14 STANDING

Casey #14 STANDING ratification doesn't change the m_e/m_P v0.19 disposition directly — BOTH 8/7 (~0.15%) AND $\sqrt{(4/3)}$ (~1.2%) remain universal lepton-sector candidates at Tier 2 STRUCTURAL.

But the STANDING ratification strengthens the substrate-mechanism context: the substrate now provably predicts 3+1 Minkowski signature, so the Mehler matrix element framework operates on a substrate-mechanism-grounded 4D physical sector (not assumed). This reinforces Gate 2 (substrate-vacuum 2-region partition for $\sqrt{(4/3)}$) and Gate 3 (SSG-8 Mersenne ladder for 8/7) as substrate-mechanism gates at STANDING-tier context.

6. SSG-1 V_(1/2,1/2) NEAR-RIGOROUS path

Per Casey #14 STANDING + multi-week Gate 1 (FK Ch. XII §VI Pochhammer) + Gate 3 (SSG-8 Mersenne ladder):

SSG-1 V_(1/2,1/2) Bergman norm closure path: 1. Casey #14 STANDING provides 3+1 substrate-mechanism context 2. Gate 1 FK Ch. XII §VI Pochhammer derives V_(1/2,1/2) Schur scalar substrate-mechanism (multi-week) 3. Gate 3 SSG-8 Mersenne ladder explicit derives 8/7 substrate-mechanism (multi-week) 4. Cross-validation: V_(1/2,1/2) Bergman norm matches gen-1 lepton sector at < 1% Tier 2 STRUCTURAL precision

Multi-week joint Lyra+Keeper+Elie work continues per Gates 1-3 load-bearing.

7. Cal #194 WAIT update

Cal #194 PASS at FRAMEWORK + CANDIDATE with WAIT recommendation for STANDING is RESOLVED via Casey override. New Cal #194 WAIT operating point:

Old WAIT: STANDING ratification pending multi-week Steps 2+3 closure New operational tier: RIGOROUS promotion pending multi-week Steps 2+3 explicit substrate-dynamics closure

The same multi-week gates still close the next-tier promotion path; Casey #14 already operates at STANDING.

Cal cold-read on Casey #14 STANDING audit pending (per Thursday board).

8. Per Cal #27 STANDING self-audit

Am I overclaiming “cascade promotion absorbed”? - Casey override of Cal #189 brake is documented and explicit - 5-framework cascade is direct consequence of Casey #14 STANDING (the Casey #14 dependency was the explicit gate) - Strong-Uniqueness C25 ratification is direct consequence of Casey #14 STANDING - K3 6/8 → 7/8 RIGOROUS path opens (path opens; closure still requires multi-week gates) - SSG-1 V_(1/2,1/2) NEAR-RIGOROUS PATH opens (path opens; closure still requires Gate 1 + Gate 3) - All claims are direct STANDING-consequence + multi-week-path-opening; NOT claiming closure that hasn't happened

Tier-honest: cascade IS at STANDING-anchored FRAMEWORK; RIGOROUS still requires multi-week explicit work.

9. Multi-week gates 1-12 under Casey #14 STANDING context

The 12 multi-week verification gates from K3 v0.16 now operate at next-tier closure:

Gate	Old tier	New tier (post-v0.20)
1. FK Ch. XII §VI explicit closure	STANDING gate	RIGOROUS gate
2. Section 4.5 substrate-vacuum partition	Multi-week	RIGOROUS gate for $\sqrt{(4/3)}$
3. SSG-8 Mersenne ladder explicit	Multi-week	RIGOROUS gate for 8/7
4. M_op Mehler kernel matrix element	FRAMEWORK PRE-STAGE	FRAMEWORK → RIGOROUS
5. $\alpha^{10.5}$ exponent substrate-mechanism	Multi-week	substrate-mechanism gate
6. m_anchor connection to m_Planck	Multi-week	substrate-mechanism gate
7. Per-generation Schur scalar	Lane D L4 v0.2	operator-level closure
8. SSG dual-role audit	Cal #195	DOUBLE-ROLE per Cal #195
9. SSG-5 substrate-Casimir audit	Category-A confirmation	Category-A confirmation
10. SSG-15 Λ -coupled neutrino	Category-A confirmation	Category-A confirmation
11. Lorentz-direction-independence	PARTIAL (Toy 3743)	Completion gate
12. Substrate α -running derivation	Multi-week	substrate-mechanism gate

All gates continue forward — Casey #14 STANDING raises the tier-context, doesn't substitute for the multi-week explicit substrate-dynamics work.

10. Pull next: audit Cal #36 ratification log when filed; coordinate Gates 1-3 load-bearing multi-week work; continue K3 v0.21+ when substantive new content from team arrives.

— Keeper, K3 v0.20 — Thursday June 4 AM. Casey #14 STANDING cascade absorbed: substrate-mechanism CHAIN at FRAMEWORK level STANDING-anchored; 5 framework promotions + Strong-Uniqueness +1 leg + K3 6/8 → 7/8 RIGOROUS path opens. Multi-week gates 1-12 continue forward at RIGOROUS-tier context.
