

FALSIFIER REGISTER v0.4 (Ext 5's owed) — Section F added: the week's three theorem-floors (Grace, R100 absorb)

v0.4 (Grace, 2026-08-26, clock-verified; merge owner Grace per R100 assignment): SECTION F added — FLOORS (named final states). The 08-26 one-shot round produced three certified floors; a floor is NOT a fired-and-lost (nothing died beyond the mechanism-as-posed) and NOT a live falsifier (the shot is spent) — it is a theorem-wall with a named door, so it gets its own shape. One structure, beside E. Lane P's floor quoted ONLY in the canonical measure_int form (Cal Section 772).

superseded header: v0.3 (Ext 5's owed) — R1 fixes F2+F6+F8 applied (Cal §766, Keeper-routed)

v0.3 (Elie, 2026-08-25, clock-verified): THREE R1 FIXES. F2 — A7's "Tier-1" label retired (the exact label F&E retires by name on this claim); now CONDITIONAL-FORCED per K1749, current statement K1830 (floor ruling). F8 — version field corrected (disk said v0.2; this header is the authoritative v0.3). F6 (joint with Grace, her half open) — the register predates K1826/K1828: Section B-LOST added, the FIRED-AND-LOST record — three pre-registered negatives (toys 5496/5498/5499). A register that lists only survivors hides half its teeth.

v0.2 (Elie, 2026-08-24): C1 updated with Keeper's page-level pin and ownership; discipline choices (fired-rows KEPT . staleness = quarantine criterion) ADOPTED per R88 checkpoint terms. v0.1 preserved below the fold unedited in git-style: nothing overwritten, this header supersedes.

Elie, 2026-08-24. ONE CI — me. Format per R87: falsifier . current bound . kill-condition . owner. Each row carries its provenance; owners confirm or amend at a checkpoint. Rows whose current bounds rest on numbers not re-verified THIS WEEK are quarantined in Section C per the banked rule ([[feedback_verify_current_experimental_numbers_for_falsifiers]]) — never quote a σ from a stale file.

A — LIVE FALSIFIERS (bound verified this week or structural)

#	falsifier	BST claim (provenance)	current bound	kill-condition	owner
A1	Genuine stochastic- Λ wobble / phantom crossing	forbidden from the MEAN (F799/T2559, monotone relaxation) AND the VARIANCE (T2571, Pauli-frozen) — two facts, not one (K1749)	DESI-DR2 crossing is GR-interpretation-dependent (scalar-tensor removes it, arXiv:2511.04610); crossing NOT a clean detection	a confirmed genuine stochastic- Λ wobble or interpretation-robust phantom	Grace
A2	CKM first-row unitarity	$\lambda_{\text{Wolfenstein}} = 1/\sqrt{20}$, $ V_{ud} = \sqrt{(19/20)}$, EXACTLY unitary by construction (Casey's chosen observable, R71; PDG pin §710)	$\lambda = 0.22501 \pm 0.00068 \rightarrow -2.06\sigma$; direct first-row sum 0.9984 ± 0.0007 (2.3σ short of unitary — currently in BST's favor)	direct determinations confirming genuine NON-unitarity at high significance; or the Wolfenstein tension growing well past 3σ	Keeper (framing Casey's)

#	falsifier	BST claim (provenance)	current bound	kill-condition	owner
A3	Sterile neutrino discovery	Five-Absence: no ν_R (banked; Lyra's multiset declares ν^c ABSENT)	no confirmed sterile signal (bound as of the bank)	confirmed sterile neutrino $\Rightarrow$ Five-Absence falls, and Cal's I-1/I-2 inherit the failure	Lyra
A4	W_R or gauged B–L discovery	surviving gauged group = exactly G_SM (T2520 no-W_R; B–L ungauged — Cal's I-1, tabled in Grace's ratification artifact with failure mode inline)	no W_R / Z'_{B–L} observed	either discovered $\Rightarrow$ the ν slot is charged and the hypercharge mechanism dies (Cal §735's own words)	Cal/Grace
A5	Neutrinos proven Dirac	the Majorana bank (Cal's I-2: required couplings = charged Yukawas only)	$0\nu\beta\beta$ unobserved but parameter space open	Dirac nature established $\Rightarrow$ the required ν -Dirac coupling ties the free bit; x-forcing falls measured	Lyra
A6	Nonzero lightest neutrino mass	$m_1 = 0$ (F619 $\nu=0$ Wallach; independently the k=0 no- Higgs-channel structure, toy 5461 — two routes, ONE bank until reconciled)	cosmology bounds Σm ; no floor established	$m_{\text{lightest}} > 0$ (e.g. Σm + ordering forcing a nonzero minimum)	Lyra (+Elie on the channel route)
A7	Koide $Q \neq 2/3$	$Q = 2/3$, projection- invariant — CONDITIONAL- FORCED (K1749; current statement K1830 floor ruling); toy 5100 region-match	0.6666605 on PDG masses (44.99974°)	improved τ mass moving Q off 2/3 beyond combined errors	Elie

B — FIRED AND SURVIVED (kept: a register that deletes its passes hides its record)

#	falsifier	outcome
B1	$\nu = 1/2$ scalar reduction point — attached as the kill-condition to my own (dead) 5477 map-pin; the wall demanded an unbanked reduction point	CONFIRMED (R84 record) — the prediction outlived the pin that generated it
B2	W2 perturbation control — a $1/30$ nudge to $Y(Q)$ must break all four anomaly sums	FIRE EXACTLY (91/4500, $1/5$ — reference-matched); gated the first evidential W2 PASS (toy 5483)
B3	A1 grid-parity must-reject — a fake flipped sector must fail	fires correctly (toy 5484)

E — * FIRED AND LOST (certified negatives; the record's other half — added v0.3, R1-F6, JOINT Elie+Grace, merged at Keeper's verify: her schema and census framing, his toy content and cites, one record)

#	what fired	what DIED	what SURVIVED	numbers + certification
E1	The α bare-vertex one-shot (frozen win-window 137.000/137.036, tol 0.010 in α^{-1} units, PREREG v2)	the winding-count story of $1/\alpha$ — BOTH legs (the winding leg by the K1687 re-homing, the unity leg by the integral); the never-banked prize list (α , $\lambda_H = 1/8$, V_{us} as a package)	λ_H and V_{us} on their INDEPENDENT banks; the $(1/4\alpha)F^2$ form as banked structure; the coefficient now a computed number with a geometric name	KK coefficient = $8\pi^3/3$ — the Hua volume of the Lie sphere, not 137 (toy 5496, half-blind $n=3,7,9 \rightarrow 5$; K1826, Cal-certified; must-reject fired in the same run; the Keystone-A falsifier cascade named at firing, adjudicated same day)
E2	The thermal-generations order falsifier (frozen R93 biconditional: Shilov-first $\leq$ $\Rightarrow$ $E_{Shilov} > E_{Cartan} > E_{bulk}$; two dead assemblies and six gates before first contact with numbers)	the thermal freeze-out ORDER mechanism as frozen	the KW strata (3, λ -independent) . the AV grading (exact GK separation 0/4/5) . the ANTI-ALIGNMENT: the mass ladder and commit-energy ladder point OPPOSITE ways — double-logged, successor exhibit one	$E = \nu^2$ exactly: (0, 9/4, 25/4) — ORDER EXACTLY INVERTED (two independent computations — Elie toy 5498 + Grace's half — identical exact triples, numbers unseen; K1828 certified)

#	what fired	what DIED	what SURVIVED	numbers + certification
E3	The commit-Boltzmann mass carrier (T3 gated prereg: parameter-free consequence 16/9 against PDG, FAIL line frozen at 5.00%)	the single-temperature Boltzmann reading of the anti-alignment — the SIMPLEST carrier, eliminated with a number	the anti-alignment order itself (still standing, still needing a carrier)	R_meas = 1.88901 (PDG 2024) vs 16/9 = 1.77778 → 5.90% > 5.00% frozen, robust across the full m_τ experimental band (toy 5499, 8/8; Keeper-certified, 2026-08-25)

F — * FLOORS: NAMED FINAL STATES (added v0.4 — the 2026-08-26 one-shot round; a floor is a theorem on the wall plus a door with a name; it reopens ONLY on a NEW prereg through its own gate)

#	what fired	the WALL (theorem, certified scope)	the DOOR (named successor, gated)	cap + certification
F1	Lane P — generation freeze-out by leadership-switch (Lyra's W3 condition, seven clauses; frozen R-bands; template order held)	Measure-Degeneration Floor: any weight derived from measure_int (interior/T754; its degenerations DEFINE the strata) is $0/\infty$ on a degenerate stratum — Γ_Ω poles at $\nu=3/2, 0$; GK triple (5,4,0) gives $w_\tau=0$, switch undefined. Count: free=0 . targets=2 . valid banked triples=0. Scope per Cal §772: measure_int only, NOT every measure	Shilov surface-measure weights (5489 residue — finite exactly where measure_int dies, which is WHY it qualifies). EXISTENCE-GATED: banked at 1 of 3 addresses; $\nu=3/2$ named open (shoulder-family candidate); $\nu=0$ unfound. Draft prereg v0 filed, COI-declared, NOT Grace's to fire	TWO-CI (Grace shot + Elie toy 5502, 6/6, provenance split: Source B from his own 5497). Paper-grade note: BST_The_Measure_Degeneration_Fl Bonus: single- τ limit reproduces E3's 16/9 at family level — must-differ confirmed structurally

#	what fired	the WALL (theorem, certified scope)	the DOOR (named successor, gated)	cap + certification
F2	Lane Λ — the thermostat self-consistency gate (gated prereg + Λ -1 pin; both controls passed; coefficient-fork pre-committed)	The thermostat CLOSES as a STRUCTURE, exponent unforced: $\Lambda/\Lambda_P =$ $(t_K/t_P)^{2p/(2-p)}$ with t_K/t_P banked (T2405: $\alpha^{(C_2^2)}$), a_1 entering legitimately at the response- coefficient fork (F63, alias-sweep certified); p FREE — free=1 on the exponent => landing (a) cannot fire => NO NUMBER WAS EVALUATED, quarantine never touched. “Curvature quantum” confirmed unnecessary as well as unbanked	Force p from D_IV ⁵ structure (how many ticks’ action per horizon cycle escape absorption $\equiv$ the 5D→4D reduction of the residual); the inheriting lane computes the exponent blind under a fresh prereg; the 280-class quarantine transfers IN ADVANCE. DOMAIN = KILL-CONDITION (Grace flag, Lyra sharpening): the exponent $2p/(2-p)$ is monotone on $p \in$ $[0,2)$ with a pole at $p = 2$ and a sign flip beyond — a forced p outside (0,2) FALSIFIES the form rather than re-signing it; the inheriting lane carries this as a can-fail limb	CONDITIONAL cap (K1057 lineage) at both quotable sites; toy 5501, 6/6, quarantine grep clean (5494-class self-reference caught in-file); Elie assembly + Grace counts/cites co-sign

#	what fired	the WALL (theorem, certified scope)	the DOOR (named successor, gated)	cap + certification
F3	Lane I — the write channel as the non-equivariant ingredient (Keeper’s pin: composition TYPE-FORCED; five candidate assemblies enumerated before any “therefore”)	Exactly one typed zero-choice assembly survives (W = QTQ, order forced twice over) and it COINCIDES with the compression onto the known closed 3-dim algebra: spin-3 scalar = 0 structurally (max spin 2 < 3 on singlet (+) V_{12}) — the wall deepens via the KNOWN accident, ZERO NEW CONTENT; the write channel joins R68c’s excluded list in compression form. k/N: 4 checks, 3 could fail, none did	Break the compression or accept explains-why: the boarded SUGGESTIVE observation (P_encode’s home IS the closure carrier — the commit confines physics to exactly the block where the algebra closes) reframes WHY but supplies no dynamics; any successor must bring new dynamics for the five quadrupole directions	DERIVED- CONDITIONAL on the Internal A floor (cap set in prereg, honored at verdict); exact Gaunt/Clebsch arithmetic, all zeros structural; Lyra shot + Cal post-audit

Section F standard: a floor row may not be softened into a “pending” and may not be reopened by labor — only by a NEW prereg through Cal steering + Keeper gate (+ Casey’s word where a lane opens). Quotations of F1’s wall MUST carry the measure_int subscript; the un-subscripted form is retired (§772; twelve-site propagation logged).

The register standard, stated once (absorbs R1-F3’s note): every σ or % in this register is computed against a NAMED release (PDG 2024 / NuFIT 6.0) with the band stated — Sections A and E alike. A fired-and-lost entry is not an embarrassment; it is the pre-registration discipline’s proof of life.

C — QUARANTINE: tension rows needing a CURRENT-NUMBER pin before any σ is quoted

#	claim	stale flag	action owed
C1	PMNS δ_{CP} — ! THREE live corpus claims on ONE observable (the week's disease, on a falsifier): T329 (March, <i>Proved</i> -tag) 309° . T2018-era 77° . K1024/K1029 (July, DERIVED-magnitude) $ \sin \delta = \text{rank}/g = 2/7 \rightarrow \approx 197^\circ$, filed as a target-innocent DUNE prediction	PINNED (Keeper, R88): NuFIT 6.0 (2024), NO: $\delta_{CP} = 212^\circ + 26/-41$. σ -table: $309^\circ \rightarrow \sim 3.7\sigma$. $77^\circ \rightarrow \sim 3.3\sigma$. $197^\circ \rightarrow \sim 0.4\sigma$ COMPATIBLE. K1801's "4.5 σ " is STALE either way	(i) corpus rules WHICH claim is live — retire-or-subscript the other two with eras and tiers (KEEPER+LYRA, in progress, K1024/K1029 chain first); (ii) row then moves to Section A with the honest σ , page-pinned. If the latest-derived claim is the live one, C1 is a PASSING sub- 1σ DUNE prediction wearing a stale fired-label — Section-A material of the first rank
C2	$y_t = 1$ EXACTLY (T2514) vs observed 0.9924	0.78% miss on the same registry row that says EXACT; my 5465 sum-rule makes "exact" incompatible with nonzero m_c under A1–A3 (assumptions since dissolved, toy 5466)	not a clean falsifier until "exact vs near-saturation" is adjudicated (exit (i) of 5465); park with named blocker. Owner: open

D — STRUCTURAL BOUNDARY MARKERS (not falsifiable; listed so nobody promotes them)

- $H^2(\Sigma; \mathbb{Z}_2) = 0$ — refutes IN ADVANCE any derivation of the Pin type from Σ 's geometry (R77). A permanent boundary, not a prediction.
- (a) FAIL-OR-SILENT (toy 5479) — the free-fermion chamber formula does not produce SM chirality sorting; failure MODE awaits the book-day's items (4)+(5).

v0.1 draft discipline (superseded above where noted): Rows A1–A7 cite banks I either verified this week or took from artifacts read this session; C-rows are quarantined precisely because I could NOT verify their numbers without a source visit. Owners: confirm, amend, or claim at the 17:00 checkpoint. — Elie
