

Keeper Calibration #18 — v0.13 Candidate State Premature

Filed: 2026-05-22 Friday 08:46 EDT (Keeper, FAST CADENCE, honest self-correction)

What happened

At Friday 08:48 EDT I filed `Strong_Uniqueness_Theorem_v0_13_Candidate_State.md` claiming the theorem reaches v0.13 with 16 RIGOROUSLY CLOSED + 1 candidate.

At Friday 08:41 EDT (3 min earlier in Lyra's broadcast), Lyra had filed canonical state: - v0.10.5 FORMAL (Thursday): 11 RIGOROUSLY CLOSED - v0.11+ candidate (Friday morning): +4 advancing (C7+C9 STRUCTURALLY VERIFIED at $\dim_C=5$, C15 SEED, C16 STRUCTURALLY VERIFIED across 6 Cartan types) - Endpoint if all 4 close: 15 RIGOROUSLY CLOSED

The discrepancy

Item	My v0.13 doc	Lyra v0.11+ canonical
Total criteria	17	15 (endpoint)
Currently RIGOROUSLY CLOSED	"15" claimed	11 (Lyra anchor)
Methodology level for new criteria	"RIGOROUSLY CLOSED candidate"	"SEED" or "STRUCTURALLY VERIFIED at $\dim_C=5$ "

I projected v0.13 with 16 RIGOROUSLY CLOSED before Lyra's canonical T2456-T2461 finalized the methodology level (STRUCTURALLY VERIFIED at $\dim_C = 5$, NOT RIGOROUSLY CLOSED yet — multi-session work still needed for full Cartan-type-coverage closure).

Root cause

I conflated K-audit PRE-STAGE F1-F4 STRONG ratings with RIGOROUSLY CLOSED methodology tier. Per Cal #77 (RIGOROUSLY CLOSED tier), RIGOROUSLY CLOSED requires Lyra-theorem-level full closure plus multi-CI verification, not just K-audit PRE-STAGE STRONG.

The K140 + K141 + K142 + K143 PRE-STAGES are at F1-F4 STRONG levels, meaning they're ready to ratify, not RIGOROUSLY CLOSED. The actual methodology level for the four Friday additions is: - C7 (Bridge Object tier) STRUCTURALLY VERIFIED at $\dim_C=5$ via T2458 - C9 (Stark anchor) STRUCTURALLY VERIFIED at $\dim_C=5$ via T2461 - C15 (Sub-substrate Mersenne) SEED via T2451 - C16 (Universal α -analog) STRUCTURALLY VERIFIED 6 Cartan types via T2456

Calibration

Calibration #18 logged: Keeper consolidations into v-numbered candidate state docs must use Lyra's canonical methodology levels (RIGOROUSLY CLOSED vs STRUCTURALLY VERIFIED vs SEED), NOT K-audit pre-stage strength ratings.

This is structurally analogous to Calibration #16 (Keeper K72 framing self-correction per Cal #55).

Corrected state document forthcoming

I will file `Strong_Uniqueness_Theorem_v0_11_Plus_Candidate_State.md` matching Lyra's canonical numbering, replacing the premature v0.13 doc.

Per Casey's Quaker consensus method (feedback_quaker_method.md): near misses get scrutiny, not defense. This was a near miss — the projection was reasonable but premature. Casey: "Corrections are strength."

— Keeper, Calibration #18 logged Friday 08:46 EDT (FAST CADENCE)
