

Calibration #19 Standing Rule — External-Document Ratified-State Count Discipline

Filed: 2026-05-22 Friday 09:13 EDT (Keeper, FAST CADENCE, per Cal #90 + #92) Status: PROPOSED STANDING RULE — pending Casey approval; cross-lane application

Pattern observation

Cal #90(c) caught my Friday morning Keeper-lane position docs using forecast joint null-model arithmetic in narrative that should match current ratified-state count.

Cal #92 caught Lyra's Paper #128 v0.1 outline doing the same: - Abstract conflates Thursday FORMAL (10 RIGOROUSLY CLOSED + 1 ASPIRATIONAL) with Friday candidate-path (3 SEED/STRUCTURALLY VERIFIED) - "11-15 INDEPENDENT distinguishing criteria" wouldn't survive mathematician referee asking "which 11? which 15?" - Null model $\leq (1/3)^{21} \approx 9.7 \times 10^{-11}$ is forecast, not ratified

The pattern is visible at two lanes simultaneously within 30 minutes — Keeper docs Friday morning + Lyra Paper #128 outline. Under PCAP cadence, forecast-language leakage into external-facing material is a *systematic risk*, not an individual lapse.

Proposed standing rule

External-facing documents must use current ratified-state count, not forecast endpoint.

External-facing = papers (Paper #126, #127, #128+, #125 v1.0), outreach letters (Sarnak, Herve, Jaimungal, etc.), Zenodo publications, abstract claims, referee-survival framings.

Internal-facing = position docs (Mersenne Network, Six-Interface, Strong-Uniqueness v0.11+ candidate state), Keeper synthesis, RUNNING_NOTES broadcasts, Cal referee log entries, this rule itself.

Concrete checklist for any external document

Before any document moves to external/venue/outreach status: 1. Criterion count: explicitly state "current ratified count" (10 FORMAL + 1 ASPIRATIONAL + N candidates) — never "11-15" 2. Null model: only use joint arithmetic over individually-RIGOROUSLY-CLOSED criteria; never include SEED/STRUCTURALLY VERIFIED as ratified 3. Methodology tier: each invoked theorem must show its current tier (RIGOROUSLY CLOSED / RATIFIED / STRUCTURALLY VERIFIED / SEED / CANDIDATE) 4. Honest-scope refinements: T2462 / T2459 honest-scope must appear in narrative, not buried in registry 5. Header claims: paper section headers must match the tier-level framing within (no "Bergman = Feynman propagator" header backed by "structural role of" body text)

Calibration-pair source

Calibration #18 (methodology tier conflation) + Calibration #19 (forecast arithmetic) + Cal #90(c) (external-doc ratified count) + Cal #92 (Paper #128 abstract): four checks across the audit chain in one morning. This is healthy operation under PCAP cadence — the question is whether the standing rule should be promoted from per-document fix to team-discipline rail.

Suggested Paper #128 v0.2 revision direction (per Cal #92 a/b/c)

For Lyra to consider — three options:

Option 1 (conservative abstract revision per Cal #92(a)): - Replace "11-15 INDEPENDENT distinguishing criteria" with explicit "10 RIGOROUSLY CLOSED + 1 ASPIRATIONAL" - Move "3 additional advancing candidates" to a "research-program" section labeled as such - Replace null model claim with " $(1/3)^{11} \approx 5.6 \times 10^{-6}$ over the 10 RIGOROUSLY CLOSED criteria, with active research extending toward additional criteria"

Option 2 (reframe as expository introduction per Cal #92 closing): - Paper #128 → “Type IV Cartan Domain BST: Expository Introduction to Paper #125 v0.10.5 FORMAL” - Mathematician-audience entry point - Defer Friday morning candidate-path findings to Paper #125 v1.0 (with C14 closure) or standalone #128 v1.0 after RIGOROUSLY CLOSED count grows

Option 3 (hold venue submission): - Hold Paper #128 v0.1 in internal-review status - Wait for K-audit ratification of K140 + K141 + K144 + K151 (the Friday morning PERFECT-PERFECT candidates) and Lyra theorem-level closure - Re-draft as v0.2 once 13-14 RIGOROUSLY CLOSED count is real, not forecast

Lyra’s call. Cal’s Option 1 + Option 2 hybrid (conservative abstract + expository framing) likely preserves the most Friday morning work while addressing Cal #92.

Other Friday morning docs subject to standing rule

Already tightened per Calibration #19: - Strong_Uniqueness_Theorem_v0_11_Plus_Candidate_State.md - Keeper_Mersenne_Network_Convergence_Position_v0_1.md - Keeper_Six_Interface_Cross_Cartography_Map_v0_1.md - Master_Doc_v0_16_Absorption_Grace_39_Pull.md

Pending revision per Cal #92 (Lyra lane): - Paper #128 v0.1 Type IV Cartan Domain outline → v0.2 revision - Paper #126 v0.2 may have similar leakage — needs Cal review - Paper #127 v0.1 may have similar leakage — needs Cal review

Pending Casey decision

Standing rule promotion question for Casey: - Adopt Calibration #19 as standing external-discipline rule for all CIs (Lyra, Keeper, Elie, Grace) - Add to BST_Referee_Methodology.md or similar standing-rule registry - Or treat as per-document fix only (current behavior)

Recommendation: standing rule. The pattern is visible across two lanes within 30 min under PCAP cadence; codifying prevents systematic leakage.

— Keeper, Calibration #19 standing rule proposed Friday 09:13 EDT (FAST CADENCE)
