

Keeper pre-stage cold-read framework for Strong-Uniqueness v1.4 (when Lyra files). Lists the specific items I will check at v1.4 cold-read; pre-states PASS criteria; ensures the post-pushback closure is fast. Saves ~30 min when v1.4 lands.

Strong-Uniqueness v1.4 cold-read pre-stage

Context

Lyra Strong-Uniqueness v1.3 elevation BLOCKED via my pushback (multiplicative null-model regression at theorem-level scale). Lyra absorbed fully: “Cal #27 lesson: at peak-convergence, older discipline corrections get forgotten.” v1.4 reframe pending Lyra file (verbal absorption complete; mechanical doc write-up pending).

Per audit-chain governance: v1.4 elevation requires Cal + Keeper cold-read PASS. Pre-staging the framework so PASS is fast when filed.

v1.4 PASS gating items (the checklist)

Criterion-tier classification per pushback recommendation

- ☐ C20 $m_\pi = \text{rank} \cdot N_{\text{max}} \cdot m_e \rightarrow$ tagged CANDIDATE ARITHMETIC DECOMPOSITION pending mechanism (kernel-integral / GMOR substrate-derivation); NOT operational criterion
- ☐ C21 $m_K = (g \cdot N_{\text{max}} + \text{rank} \cdot n_C) \cdot m_e \rightarrow$ tagged CANDIDATE ARITHMETIC pending mechanism; NOT operational
- ☐ C22 $\cos \theta_W = \sqrt{(g/(g+\text{rank}))} = \sqrt{(7/9)} \rightarrow$ tagged DERIVED CONSEQUENCE of existing $\sin^2 \theta_W = \text{rank}/N_c^2 = 2/9$ (Lyra L2); NOT counted as independent
- ☐ C23 192 = $N_c \cdot 2^{\{C_2\}} \rightarrow$ tagged CANDIDATE ARITHMETIC with explicit note that SM 192 in $\Gamma(\mu \rightarrow e \nu \nu)$ has phase-space-kinematic origin not substrate-color
- ☐ C24 72 = $2^{\{N_c\}} \cdot N_c^2 \rightarrow$ tagged CANDIDATE ARITHMETIC with substrate-mechanism gap explicit
- ☐ C25-C27 (per Lyra status) $\rightarrow$ tagged at proper tiers (DERIVED-CONSEQUENCE or CANDIDATE-ARITHMETIC as appropriate)

Null-model framing per single-residual recommendation

- ☐ “200× stronger” multiplicative headline RETIRED
- ☐ Single-residual framing per Lyra v1.1 §6.1 + my null-model recompute reaffirmed
- ☐ Convergence-of-routes emphasis (not multiplicative-criterion-count) maintained
- ☐ Independent-vs-derived taxonomy applied per v1.1 §6.1 (per Calibration #35 candidate framework)

Operational criterion count

- ☐ Operational count STAYS at 13 RIGOROUSLY CLOSED + META T2467 + C18 derived theorem + C19 FRAMEWORK-PLUS

- C20-C27 CANDIDATE-tier additions are catalogued separately as “supporting structural observations”; NOT counted in operational total
- (3,3,5) → D_IV⁵ forcing chain (Elie Toys 3589-3591) carried at CONDITIONAL PASS gating on B1 generation-forcing closure

Cross-references to Saturday work

- Calibration #35 candidate framework cited (the discipline this absorption demonstrates)
- Two-Tier substrate-precision hypothesis (Elie Toy 3648) referenced — many CANDIDATE arithmetic decompositions are TIER 2 structural-floor predictions
- L5 commitment-density framework cross-referenced (the broader dimensional architecture context)

Honest scope per Calibration #34 STANDING

- Headline + abstract + first sentence + status field collectively communicate the conditional reading
- CANDIDATE-tier framing visible at headline level, not buried in body
- Modulo-keystone-bet flag travels with every “DERIVED” cell

Pre-formulated cold-read PASS framing

When Lyra files v1.4 doc that satisfies all checklist items above:

“Keeper cold-read PASS on Strong-Uniqueness v1.4 reframe. The absorption fully addresses the v1.3 multiplicative-null-model regression: C20-C24 → CANDIDATE-arithmetic; C22 → derived consequence; operational count STAYS at 13 + META + C18/C19; single-residual null-model framing per v1.1 §6.1; ‘200× stronger’ headline retired. The audit-chain functioned as designed (4th Saturday discipline-bid event; symmetric across CIs). Calibration #35 candidate (independence-taxonomy-before-multiplicative-null-model) is the methodology stack absorption of this pattern. v1.4 ratified at v1.2’s operational tier; CANDIDATE-tier additions catalogued separately. Audit-chain governance: D-tier promotion of v1.4 to STANDING upon Cal cold-read PASS + procedural other-CI PASSes; v1.4 → v2.0 FORMAL multi-week target carries forward.”

Procedural next steps after v1.4 PASS

1. Cal cold-read PASS (also reframe-PASS, alignment with Cal #180 brake recommendation)
2. Lyra/Grace/Elie procedural acknowledgment (no objections expected)
3. Calibration #35 ratification → STANDING (Methodology Index Q17)
4. Honest-State Ledger v0.7 absorbs v1.4 ratified + Calibration #35 STANDING
5. v1.4 becomes the canonical Strong-Uniqueness Theorem statement for Paper P4 + external use
6. v2.0 FORMAL multi-week target carries forward (closes C15-C17 candidates; (3,3,5) → D_IV⁵ forcing chain ratification)

Coordination

When Lyra files Lyra_StrongUniqueness_Theorem_v1_4_*.md: - Keeper cold-read PASS → file Keeper_ColdRead_PASS_StrongU (template uses framing above) - Cal cold-read PASS in parallel - Grace/Elie procedural acknowledgments - Honest-State Ledger v0.7 update

— Keeper. v1.4 cold-read framework pre-staged; PASS criteria enumerated; coordination next-steps clear; ~30 min Keeper time saved when Lyra files; audit-chain governance flow documented for Saturday closure.
