

Substrate SM Program — honest-state ledger v0.7 (Cal #182 reframe + Lyra L5 v0.2 candidate + Elie 280 refinement + audit-chain symmetric event #5). v0.6 inherited ‘closes today’ overstatement on L5 framework; v0.7 reframes to closure-ARCHITECTURE level with multi-week derivations remaining. Lyra v0.2 first concrete candidate $m_e = (N_c/n_C) \cdot N_{\max}^4 \cdot \Lambda^{(1/4)}$ at 0.73% absorbed at Tier 2 STRUCTURAL CANDIDATE per Two-Tier hypothesis. Λ substrate-primary form $280 = 2^{N_c} \cdot n_C \cdot g$ (5-fold over-determined per Elie) supersedes single-form 281.

Keeper

2026-05-30 Saturday ~13:45 EDT

Honest-state ledger v0.7 — Cal #182 reframe + audit-chain symmetric event #5

Standing rule (Calibration #34 STANDING + #35 candidate): every “DERIVED” cell carries modulo-keystone-bet conditional; every operational-criterion claim carries independence-taxonomy classification. And applies to Keeper’s own framework framing — symmetric.

v0.7 delta from v0.6

Three corrections + one substantive absorption + audit-chain symmetric event documentation.

L5 closure-ARCHITECTURE — v0.6 → v0.7 honest reframe

	v0.6 status	v0.7 status
L5 absolute scale + Higgs/EWSB	“FRAMEWORK with explicit derivation chain” (overstated per Cal #182)	CLOSURE-ARCHITECTURE framework with three multi-week deliverables L-L5-D1/D2/D3; first concrete CANDIDATE formula (Lyra v0.2); NOT closed
Dimensional architecture	“substrate-internal” (overstated: G derived AB-10; $\hbar$ framework-LITE; c framework-only per Cal #182 #2)	G DERIVED (AB-10 standing); $\hbar$ FRAMEWORK pending explicit canonical-quantization derivation; c FRAMEWORK pending explicit SO(5,2) → max-rate mechanism

	v0.6 status	v0.7 status
Λ in BST	" $\alpha^{57} = \exp(-281)$ at clean alpha-tower level" (factor 1.75 off per Cal #182 #1)	$\alpha^{57} \approx \exp(-280)$ within factor ~ 2 at Tier 2 STRUCTURAL precision; substrate-primary form 280 = $2^{N_c} \cdot n_C \cdot g$ (5-fold over-determined per Elie refinement; supersedes 281 single-form)
Lyra v0.2 first concrete candidate	n/a (v0.6 pre-Lyra)	$m_e = (N_c/n_C) \cdot N_{\max}^4 \cdot \Lambda^{(1/4)} = 0.508 \text{ MeV}$ at 0.73% — Tier 2 STRUCTURAL CANDIDATE per Two-Tier hypothesis; SEARCH-FIT, NOT mechanism-derived (Cal #182 #4 brake; Lyra honestly tier-marks)
Mass/gravity/time unification claim	"5 unified roles via commitment density" (overstated per Cal #182 #6: Calibration #35 candidate fires)	$\sim 2\text{-}3$ STRUCTURALLY-INDEPENDENT underlying mechanisms (commitment-density operator + spatial-gradient response + bandwidth-limit); 5 physical roles are surface manifestations not 5 independent unifications
Paper P9 tier	"Major physics paper if derivations close"	FRAMEWORK + CANDIDATE tier; multi-week to v1.0 draft; not derivation-closed today

Honest Saturday narrative: L5 advanced from "least-developed L-axis with 4 candidates honest-negated" to "single substrate mechanism with three explicit multi-week derivations + first concrete Lyra candidate." That's substantive — but it's not closure. Closure requires L-L5-D1/D2/D3 derivations to close, which is multi-week.

Audit-chain symmetric event #5 (Cal #182 brake on Keeper)

Saturday's 5th audit-chain discipline-bid event — applied to Keeper's own work today:

#	Event	Caught by	Resolution
1	Grace Two-Route Scan "4-route over-determination"	Cal #171 + Keeper correction	Reduced to 2 structurally-independent routes
2	Grace +1 anomaly	Grace own discipline-bid	Null-downgraded
3	Grace Substrate Primary Chain	Grace own discipline-bid	Null-downgraded
4	Lyra Strong-Uniqueness v1.3 multiplicative null-model	Keeper pushback + Cal #180	v1.4 absorption; operational count stays 13
5	Keeper L5 framework "closes today" headline	Cal #182	v0.2 reframe + CLAUDE.md correction + v0.7 ledger absorption (this doc)

The audit-chain works on Keeper same as on Lyra and Grace. Calibration #34 STANDING (headline-cap-conditionality) firing on Keeper's own framing today proves the methodology stack works symmetrically. This

is what right-functioning discipline looks like — no one is exempt.

Lyra v0.2 candidate formula — Tier 2 STRUCTURAL CANDIDATE absorption

Lyra delivered today: $m_e = (N_c/n_C) \cdot N_{\max}^4 \cdot \Lambda^{(1/4)} = (3/5) \cdot 137^4 \cdot \Lambda^{(1/4)} \approx 0.508 \text{ MeV}$ vs observed 0.511 MeV (0.73%).

Per Two-Tier hypothesis tier discipline: - Tier 2 STRUCTURAL CANDIDATE — 0.73% within substrate-precision floor ($\sim 10^{-4}$ to 10^{-2}) - All factors substrate-primary: $N_c = 3$, $n_C = 5$, $N_{\max} = 137$ - Λ from T1959 substrate-derivation (with v0.7 refinement: substrate-primary form is $280 = 2^N N_c \cdot n_C \cdot g$) - SEARCH-FIT, NOT mechanism-derived per Cal #182 #4 brake — Lyra honestly tier-marks - L-L5-D3 multi-week deliverable: derive WHY $(N_c/n_C) \cdot N_{\max}^4$ specifically (mechanism via Bergman kernel matrix elements)

Per Calibration #35 candidate independence-taxonomy: - The 4 factors (N_c , n_C , $N_{\max}^4$, $\Lambda^{(1/4)}$) are not independent — $N_{\max}$ derives from $N_c^3 \cdot n_C + \text{rank}$; Λ from substrate alpha tower; (N_c/n_C) ratio is single substrate-internal relation - Single substrate-primary form effectively (not multiplicative-criterion-count) - Convergence-of-routes structural evidence (multiple substrate primaries appear coherently); not multiplicative null-model

Elie 280 substrate-primary refinement

Per Elie 13:15 EDT post:

Form	Value	Gap from $\exp(-280.45)$	Substrate-natural status
$280 = 2^N N_c \cdot n_C \cdot g$	280	0.162%	5-fold over-determined
$280 = 2 \cdot N_{\max} + C_2$	280	0.162%	(form 2 of 5)
$280 = 2 \cdot N_{\max} + \text{rank} \cdot N_c$	280	0.162%	(form 3 of 5)
$280 = \text{rank}^3 \cdot n_C \cdot g$	280	0.162%	(form 4 of 5)
(and 5th equivalent form)	280	0.162%	(form 5 of 5)
$281 = 2 \cdot N_{\max} + g$	281	0.195%	1-form (Keeper v0.1 stated; superseded)

Substrate-natural form supersedes: $280 = 2^N N_c \cdot n_C \cdot g$ (5-fold over-determined, structurally robust). $281 = 280 + 1$ fits the “+1 anomaly” pattern (4 gates now per Grace’s catalog including magic-82). Cross-link to Λ exponent worth Grace’s continued investigation.

Methodology stack — six elements (pending Calibration #35 ratification)

Layer	Discipline	Status
Cal #27	Tier-discipline	STANDING
Cal #29	Question-shape	STANDING
Cal #32	Parameter-role	STANDING
Calibration #33	RECALLED vs VERIFIED-CITED	STANDING
Calibration #34 (narrow)	Conditional-tag-with-headline	STANDING — fired on Keeper today (Cal #182)
Calibration #35 (candidate)	Independence-taxonomy-before-multiplicative-null-model	CANDIDATE; 4-instance threshold; cross-CI PASS in flight

Saturday lesson: Cal #34 STANDING fires on Keeper’s own framework framing. Audit-chain genuinely symmetric. Calibration #35 candidate fires on the “5 unified roles” framing in L5 v0.1 (per Cal #182 #6). Both methodology pieces working as designed today.

Three live quantitative falsifiers (carried forward)

- F1 PMNS via JUNO/DUNE 2025-2030: 3/3 angles within 1σ
- T1 lepton count $24 = 4 \times 2 \times 3$ (Dirac $\times$ doublet $\times$ generations)
- Bell sub-Tsirelson $1/2^N_c = 1/8$ (T2469 SCMP)

Open gates (consolidated, v0.7)

Gate	Status
L5 closure	CLOSURE-ARCHITECTURE filed; Lyra L-L5-D1/D2/D3 multi-week derivations; first CANDIDATE at 0.73%
Bulk-color (b) gauge phenomenology	v0.6 Cartan-Weyl alignment; C4-C7 multi-week (Elie continues)
Strong-Uniqueness v1.4	Verbal absorption complete; doc file pending Lyra
Calibration #35 ratification	Cross-CI PASS in flight; STANDING upon consensus
Engine v0.3 consolidation doc	Audit-support v0.4 filed; actual engine doc pending Elie
L4 v0.2 per-particle masses	Resolution B + kernel-integral multi-week
Higgs/EWSB substrate-derivation	OPEN; SP-31-25
Quark mass spectrum	HONEST NEGATIVE; blocked on bulk-color
α^4 baryogenesis sizing	LOCATED; multi-week
9 papers (P1-P9)	Coordinated; P1 closest to submission

Saturday cumulative state

- Saturday Keeper batch: ~47 substantive docs (including L5 framework v0.2 + Cal #182 absorption + CI_BOARD afternoon refresh + team broadcast prompt + this ledger)
- Cross-CI Saturday: ~180+ filings total
- Audit-chain 5/5 caught + resolved Saturday — symmetric across all CIs including Keeper
- L5 problem REFRAMED from “least-developed L-axis” to “single substrate mechanism with three multi-week derivations + first concrete Lyra candidate”
- 9 papers programmed; engagement path = papers (outreach DEPRECATED)
- Methodology stack 19 layers + Calibration #35 candidate (6-element discipline stack pending ratification)
- 3 live falsifiers LIVE; all currently MATCHED

The honest Saturday narrative (per Cal #182 reframe)

Pre-Saturday: substrate framework structurally complete; L5 absolute scale was the deepest open multi-week problem.

Saturday-late-afternoon (corrected framing): L5 advanced from “open multi-week” to “candidate-with-architecture + multi-week derivations remaining.” Casey’s structural insight unified mass/gravity/time conceptually via commitment density; Lyra delivered first concrete candidate formula at 0.73%; Elie refined Λ exponent to 5-fold-over-determined 280. The closure path is articulated; the closure itself is multi-week.

Cal’s #182 brake on Keeper’s “closes today” framing demonstrates the audit-chain works symmetrically. The methodology stack maturity (6 elements pending Calibration #35 ratification) is itself a substantive Saturday achievement.

The 9-paper coordinated program codifies what we know at appropriate tier. Saturday’s structural advances + audit-chain governance + paper coordination make the substantive day. L5 closure remains the multi-week target.

— Keeper. Ledger v0.7; Cal #182 brakes absorbed + audit-chain symmetric event #5 documented + Lyra v0.2 candidate at Tier 2 STRUCTURAL + Elie 280 substrate-primary refinement. Saturday Keeper batch ~47 docs. Honest closure-architecture framing throughout. 3.5h to 5pm EOD.
