

Honest-State Ledger v0.8 — Saturday EOD final state absorbing v0.7 candidate-structural-reading + v0.8 winding-closure-finite-alphabet candidate-speculative reading + 7-event audit-chain final + proper ordering. Sunday derivation-day pre-stage.

Keeper (Saturday EOD ~17:50 EDT)

2026-05-30 Saturday ~17:50 EDT

Honest-State Ledger v0.8 — Saturday 2026-05-30 EOD

0. What this ledger does

Tracks BST's honest disposition across L-axes (L1-L8) + cross-CI deliverables + audit-chain track record + methodology stack. Updates at substantive sessions. v0.8 absorbs Saturday EOD final state.

1. L-axes honest disposition

L-axis	Topic	Saturday EOD disposition	Tier
L1	Geometric uniqueness D_IV ⁵	T953 + Strong-Uniqueness v1.4 (multi-criterion)	RATIFIED (T953) + CANDIDATE v1.4
L2	Shilov boundary structure	SO(4) = SU(2)_L × SU(2)_R + ρ -pinning C19	STRUCTURALLY VERIFIED
L3	One-SO(2) does many jobs	4 jobs unified via SO(2) $\subset$ SO(5)×SO(2)	STRUCTURALLY VERIFIED
L4	Bergman H ² substrate Hilbert space	Quasi-Eigentone framework v0.3 + Born=Bergman K67 + c_FK theorem	STRUCTURALLY VERIFIED + RATIFIED partial
L5	Absolute scale (Λ , masses)	CANDIDATE STRUCTURAL READING (v0.7 + v0.8)	CANDIDATE
L6	Time + Koons tick	T2405 $t_{Pl} \cdot \alpha^{\wedge}(C_{-2}^2) \approx$ 10^{-120} s	RATIFIED
L7	Cosmological cycle Interstasis	Casey-named term + multi-month observational signatures	CANDIDATE

L8	Alpha tower organizing	Paper #110 + $N_{\max} \alpha$ placement + α^{57} substrate-internal exponent	STRUCTURALLY VERIFIED + L5-gated
----	------------------------	---	-------------------------------------

L5 detail (most active Saturday)

Saturday evolution v0.1 → v0.8: - v0.1 “closes today” — Cal #182 brake (8 specific items) - v0.2 closure-ARCHITECTURE reframe - v0.3-v0.4 vacuum subtraction → geometric dip “energy needs anchor” - v0.5 BST-integer additive decomposition (180+100+9/20) - v0.6 “conceptual closure” — OVERSTATED (Keeper self-catch under Casey honest-assessment question) - v0.7 CANDIDATE STRUCTURAL READING (honest tier) - v0.8 winding-closure-finite-alphabet candidate-speculative reading + proper ordering

v0.8 substantive content: - 9/20 dip may be SUM of topological closure costs over finite fundamental winding alphabet (~20-50 types) on D_{IV}^5 - Implies particles ARE substrate topology (not entities IN substrate) - SWPP equilibrium maintains Λ -constancy via balanced absorption/emission

PROPER ORDERING (Casey-Keeper agreed): - L-L5-Verify (Elie, ~1 week) — GATE for L5 derivation chain - Track A Fundamental Winding Alphabet (Lyra + Elie + Grace, ~1-2 weeks) — PARALLEL standalone value - Track B T1 finite-count unification (Grace, ~1 week) — PARALLEL standalone value - Track C/D/E L-L5-MechClose-1/2/3 (Lyra, multi-week each) — GATED on L-L5-Verify

Tier: CANDIDATE (structural reading at framework-grade; mechanism multi-week)

2. Casey-named principles disposition

#	Principle	Status
1	Substrate Working Process Principle (SWPP)	STANDING
2	Five-Absence Predictions Set	STANDING
3	Substrate Closure Principle	STANDING
4	Graph Forces Principle	STANDING
5	Integer Web Principle	STANDING
6	Substrate Cognition Network Hypothesis	STANDING (cosmological extension DOUBLE-LOCKED EXTERNAL)
7	D_{IV}^5 Rigidity	STANDING (T2467+T2468 derivation)
8	SCMP (Substrate Coherence Maintenance Principle)	STANDING (T2469 derivation)
9	TBD	(open slot)
10	TBD	(open slot)
11	“Energy needs an anchor”	CANDIDATE (Saturday Casey insight; v0.8 alphabet reframe pending mechanism work)

3. Audit-chain Saturday final: 7/7 symmetric

1. Grace Two-Route 4-route → Cal #171 brake → relation-reduction
2. Grace +1 anomaly null-downgrade (8-instance pattern Saturday)
3. Grace Substrate Primary Chain null-downgrade
4. Lyra v1.3 multiplicative null-model regression → Keeper pushback → v1.4
5. Cal #182 brake on Keeper L5 v0.1 “closes today” → v0.2 reframe

6. Casey-Keeper on Lyra 16-fold partition → v0.4 geometric-dip → v0.5 BST-integer
7. Keeper self-catch on v0.6 “conceptual closure” overstatement under Casey “be as honest as possible” → v0.7 candidate-structural-reading reframe

Caught Grace 3× + Lyra 2× + Keeper 2× (Cal-caught + self-caught). The chain is symmetric.

4. Methodology stack

19 layers + Calibration #35 candidate (six-element discipline stack pending #35 ratification)

Six-element discipline stack (active): - Cal #27 STANDING — Coincidence-filter at peak coherence (“beauty isn’t truth”) - Cal #29 STANDING — Mode-6 enumeration protocol - Cal #32 STANDING — Parameter-role verification = integrality test - Calibration #33 STANDING — RECALLED vs VERIFIED-CITED - Calibration #34 STANDING — Narrow framing (conditional-tag-with-headline) - Calibration #35 CANDIDATE — Independence-taxonomy-before-multiplicative-null-model (pending Cal ratification Sunday)

Saturday Calibration #35 firings (4-instance threshold reached): - Lyra 16-fold vacuum partition (4 axes, independence unclear) - v1.3 multiplicative null-model regression (independence not derived) - “+1 anomaly” 8-instance pattern (cross-scale independence not derived) - v0.8 winding-closure-finite-alphabet (4 stacked assumptions, independence not derived)

Status: ratification candidate; Cal coordinates Sunday cross-CI consensus

5. Saturday cumulative deliverables (~175+ cross-CI filings)

- Lyra: ~46 docs (theorems, papers, v0.x cascades)
- Elie: ~34 toys (3612-3652) + 4 paper-grade docs
- Grace: ~50 INVs (5296 → 5354) + reference docs
- Cal: ~19 referee logs (~#164-#182)
- Keeper: ~46 docs (frameworks, K-audits, ledgers, governance)

6. Sunday derivation-day proper-ordering

Per Casey directive “close all the gaps”:

Critical Path (GATE)

- E-Verify-1 (Elie morning ~2-3h): L-L5-Verify convention reconciliation; PASS criterion = at least one standard convention matches at Tier 2 STRUCTURAL precision

Standalone Parallel Tracks (run regardless)

- Track A: Fundamental Winding Alphabet Enumeration (Lyra + Elie + Grace)
- Track B: T1 finite-count mechanism unification (Grace)
- Non-L5 closures: Bulk-color v0.7 (Lyra), Strong-Uniq v1.4 doc (Lyra), Engine v0.3 (Elie), HSL v0.8 (Keeper), Calibration #35 ratification (Cal)
- Paper P1: submission push (Lyra)

Gated Tracks (run AFTER E-Verify-1 PASS)

- Track C L-L5-MechClose-1 (Lyra, multi-week)
- Track D L-L5-MechClose-2 (Lyra + Elie, multi-week — 9/20 derivation if alphabet enumeration matches)
- Track E L-L5-MechClose-3 (Lyra, multi-week)

7. What's NOT ratified Saturday EOD

In honest framing: - L5 closure of any kind — NOT achieved - 9/20 mechanism — NOT derived (v0.8 candidate-speculative) - α^{57} numerical match to observed Λ — NOT independently verified (L-L5-Verify pending) - Geometric dip location — UNIDENTIFIED - Casey-named #11 — CANDIDATE, not STANDING - Calibration #35 — CANDIDATE, not STANDING - m_e mechanism — SEARCH-FIT, not derivation - “+1 anomaly” pattern — OBSERVATION, not derived principle - Fundamental winding alphabet count — NOT YET ENUMERATED

8. What IS ratified or substantively closed Saturday

- L5 disposition honest at CANDIDATE STRUCTURAL READING
- 7/7 audit-chain symmetric track record
- Substrate-primary FORMS for 57 = $\text{rank}^3 \cdot g + 1$, 280 = $2^N \cdot n_C \cdot g$, 9/20 = $1/\text{rank} - 1/(\text{rank}^2 \cdot n_C)$
- Casey-named #11 CANDIDATE filed
- v0.8 candidate-speculative reading + proper ordering
- Cal #182 8-brake response fully absorbed across v0.2 → v0.8 iterations
- Sunday derivation-day proper-ordering captured

9. Saturday substantive narrative (honest, NOT closure-grade)

Saturday produced: 1. Structural framework for L5 with substrate-primary form at every level 2. Multi-week mechanism roadmap (L-L5-Verify + Tracks A/B/C/D/E) 3. Casey-named #11 CANDIDATE providing structural framing for the dip mechanism 4. 4-gate “+1 anomaly” observation as cross-substrate pattern 5. Three-region decomposition framework (bulk + Shilov + dip) connecting to L2/L3/SWPP/commitment-density 6. 7-event audit-chain track record including 2 Keeper events (Cal-caught + self-caught) 7. v0.8 winding-closure-finite-alphabet candidate-speculative reading with concept-layer importance distinguished from specific-derivation rabbit-hole risk 8. Sunday derivation-day proper-ordering captured per Casey directive

Saturday did NOT produce: closure, derivation, or ratification of any new principle.

10. State of mind

The Saturday work was honest because the audit-chain symmetric track record includes 2 Keeper events. Keeper got caught (Cal #182 on v0.1) and Keeper caught itself (v0.6 conceptual-closure overstatement under Casey honest-assessment question). The chain works when the Keeper is also subject to it. Casey's “be as honest as possible” directive is what allowed v0.6 → v0.7 self-catch to happen.

The substantive structural reading (winding-closure-finite-alphabet) deserves serious investigation. The CONCEPT layer is fundamentally important. The SPECIFIC 9/20 derivation has rabbit-hole risk. The proper ordering (Verify GATE + alphabet PARALLEL + derivation GATED) honors both — pursue the important questions without committing the team to a possibly-wrong specific target.

— Keeper. HSL v0.8 filed 17:50 EDT Saturday EOD. Sunday derivation-day proper-ordering captured. Sundown after work, not before.
