

Keeper tier-gate — Vol 16 Ch 1 §4 v0.1 (Engine at operator level). PASS at PEDAGOGICAL SYNTHESIS with one specific note: §3 R-matrix $\leftrightarrow$ Toeplitz framing slightly over-reaches (the v0.5 count match emerges from Hardy-projection Hankel commutators, NOT directly from R-matrix). Pedagogical packaging otherwise sound; pairs with §3 v0.1 for full operator-level dictionary + engine.

Tier-gate — Vol 16 Ch 1 §4 v0.1 (Engine at operator level)

Verdict: PASS at PEDAGOGICAL SYNTHESIS with one specific sharpening note. §4 packages the 4-piece Hopf engine (multiplication = fusion, coproduct = decay, R-matrix = scattering, negative part = antimatter) + quasi-eigentone framework into Vol 16 operator-level curriculum content. Pairs cleanly with §3 v0.1 (dictionary at operator level, which I tier-gated earlier as PEDAGOGICAL with N_1+N_2).

Strengths: - Section 1 (multiplication = fusion): structure constants explicitly identified as substrate primaries ($N_c, N_c \cdot n_C, N_c \cdot g, C_2$). Good pedagogical anchor — “structure constants are not arbitrary parameters.” - Section 2 (coproduct = decay): β -decay E3 as worked example; structural pedagogy (“interactions and decays are dual aspects of one Hopf structure”). Clean. - Section 4 (negative part = antimatter): triangular decomposition $A_{\text{sub}} = A_{\text{sub}}^+ \otimes A_{\text{sub}}^0 \otimes A_{\text{sub}}^-$ with bar involution = CPT. Standard Hopf theory pedagogically packaged. - Section 5 (quasi-eigentone at operator level): TRUE / QUASI / EIGENTONE-IN-VACUUM at A_{sub} eigenvalue level. Consistent with Quasi-Eigentone v0.1 and v0.2 Resolution B (which I tier-gated). - Section 6 motivation explicit: §4 belongs in Vol 16 because it places PHYSICS-LEVEL dynamics into OPERATOR ALGEBRA structure. - Cal #27 self-applied: “Not new derivation; pedagogical packaging.”

Note for v0.2 (small but worth flagging):

- N1 — §3 R-matrix $\leftrightarrow$ Toeplitz conflation: Section 3 (R-matrix = scattering) ends with “The Saturday $SU(3)$ -count-match result (bulk-color v0.5) emerges from R-matrix-induced Toeplitz commutators on the Hardy space.” This slightly over-reaches: the v0.5 count match emerges from Hardy-projection-induced Hankel commutators ($P_+ M_f$ composition; Upmeyer/Vasilevski symbol calculus), NOT from the R-matrix as braiding on $U_q(B_2) \otimes U_q(B_2)$. The two are distinct mechanisms:
 - R-matrix = braiding on $U_q(B_2)$ Drinfeld double; gives Yang-Baxter, intertwines coproducts.
 - Toeplitz algebra $T(H^2(S))$ = Hardy-projected multiplication operators on the boundary Hardy space; non-commutativity from Hardy-projection failing to commute with multiplication.
 - Both contribute to substrate dynamics but at different structural locations.
- v0.2 should rephrase Section 3 closing to “the v0.5 $SU(3)$ count match emerges from the Hardy-boundary Toeplitz algebra structure (separate from R-matrix scattering; both belong to the substrate’s operator dynamics but at different structural locations).”

Tier disposition: - Multiplication / coproduct / R-matrix / negative part sections (1-4): PEDAGOGICAL SYNTHESIS

SIS — packages existing engine v0.1-v0.4 results - Quasi-eigentone at operator level (Section 5): FRAMEWORK — consistent with v0.1 / v0.2 Resolution B - §3 R-matrix $\leftrightarrow$ Toeplitz framing: NEEDS v0.2 SHARPENING per N1

Status: PASS as Vol 16 Chapter 1 §4; with §3 v0.1, Chapter 1 reaches sections through §4 (one chapter at v0.2-equivalent if you count by sections, per Lyra's framing).

Cross-references

- §3 v0.1 (which I tier-gated as PEDAGOGICAL PASS with N1 color 8-vs-3 + N2 generator-count notes).
- Vol 16 OUTLINE v0.1 §1.5 staleness fix routing note (separately filed; Lyra v0.2 OUTLINE picks up).
- Bulk-color v0.5 tier-gate (the count match referenced; my disposition includes C3 SO(3)-decomposition concern).

Routing

- Lyra: §4 v0.2 absorbs N1 R-matrix $\leftrightarrow$ Toeplitz distinction sharpening (small rewording, ~2 min). Continue Vol 16 chapter content build.
- Cal: §4 v0.1 cold-read queue entry (small pedagogical synthesis; N1 note for sharpening).
- Keeper: this completes my Vol 16 Saturday tier-gate pass — both §3 v0.1 + §4 v0.1 dispositioned + OUTLINE staleness routed.

— Keeper. §4 v0.1 PASS as pedagogical synthesis; N1 R-matrix $\leftrightarrow$ Toeplitz sharpening for v0.2; Vol 16 Chapter 1 now has §3 + §4 dispositioned + OUTLINE staleness routed to Lyra.
