Master Ledger v0.7 — delta update

End-of-Saturday-late-morning canonical state. v0.7 is a DELTA update on v0.6 capturing the Saturday late-morning team-tier-gate batch + Grace queue items 3, 4, 1 completed.

For complete state: read v0.6 + this delta.

Section A — Standing conventions: 5 → 6

#	Convention	Status
1	ONE genus = $n_C = 5$	unchanged
2	α -disambiguation: $\sigma_{BF} \neq \gamma^5 \neq \alpha$ $= N_{\max}^{-1} = 1/137$	unchanged
3	7/2-vs-5/2 ratio role disambiguation	unchanged
4	Macdonald-parameter $q_{Mac}=0$, $t_{Mac}=2$	unchanged
5	Modulo-keystone (every DERIVED rides on K-types=particles bet)	unchanged
6	Cal #34 STANDING narrow framing: conditional-tag-with-headline discipline (reader of headline+abstract+first sentence must walk away with conditional reading)	NEW Saturday afternoon ratified per Keeper cold-read PASS

Section B — DERIVED-modulo-keystone additions (v0.6 → v0.7)

Claim	Basis	INV
Periodic Table v0.8 absorbing v0.5 8-gluon tripartition + Resolution B + Cal brake	Grace consolidation	INV-5332

Section C — FRAMEWORK-PLUS additions

Claim	Basis	INV
8-gluon $V_{(1,1)}$ gauge-cell tagging: 8 = 3 Toeplitz + 3 Hankel + 2 K-Cartan substrate-derived count	Lyra v0.5 numerical match	INV-5314/5317/5332
Resolution B lepton-row mapping: gen-1 trivial / gen-2 adjoint / gen-3 vector mediator (lean B; T190 exponent C_2 = adjoint Casimir gauge-mediator separate from {0,4,6} spinor ³ intermediate Casimirs)	Lyra v0.2 Quasi-Eigentone	INV-5332

Section D — STRUCTURAL (post-null-model honest tier)

Cal Two-Route relation-reduction brake absorbed (INV-5330): - 12 = SM total gauge dim is 2-route structurally-independent (NOT 4-route) - Cluster qualitatively stands (SM-gauge content 8-18 in substrate sum-product overlap) - Specific 4-route framing WITHDRAWN - Calibration #33 STANDING applied INTERNALLY to substrate-primary relations

Toy 3638 null model (INV-5331): - ‘Substrate Doubly-Over-Determination Principle’ Casey-named-principle candidate BLOCKED at candidate-tier - Lower-bar ‘Substrate-Arithmetic SM-Gauge Coincidence’ correct disposition - Concordant with Cal #171 + Keeper N1 + Toy 3630 SM-aware null ($Z=+0.9\sigma$)

Section E — Self-corrections column updated to 19 items (5 Saturday + 1 brake + 2 null-models)

Recent Saturday item	INV
Exponential mass-ansatz {0,4,6} refuted quark sector	INV-5305
$V_{(3/2,3/2)}$ Casimir error / SUSY-without-SUSY withdrawn	INV-5306
Two-Route Scan principle null-downgrade ($+0.9\sigma$ SM-aware)	INV-5316
1:1 channel-gen mapping refuted (T190 inconsistency; RESOLVED in v0.7 via Lyra Resolution B — INV-5322)	INV-5322
‘+1 anomaly’ principle null-downgrade ($+1.85\sigma$)	INV-5327
Cal Two-Route relation-reduction brake (4-route → 2-route under substrate-primary relations)	INV-5330
Substrate-Doubly-OD null model (Toy 3638) confirms principle blocked at candidate-tier	INV-5331

Total Saturday credibility-column gains: 7 (5 self-corrections + 1 brake-absorption + 1 null-model toy validation).

Section F — Resolution B IMPORTANT NOTE on INV-5322

The 3rd Saturday self-correction (INV-5322) flagged the {0,4,6} 1:1 channel-generation mapping as inconsistent with T190.

Lyra Quasi-Eigentone v0.2 Resolution B RESOLVES this honestly: - The {0,4,6} substrate-primary arithmetic sequence STANDS as structural labels for spinor³ channel intermediate Casimirs (Elie E7 rigorous) - T190 exponent $C_2 = 6$ is the GAUGE-MEDIATOR Casimir for the $e \rightarrow \mu$ transition — SEPARATE structural role - Both involve

C₂=6 but for different reasons - The {0,4,6} doesn't need 1:1 generation mapping; it's a structural-label sequence
 - The Lyra v0.2 lean B mapping {gen-1↔trivial-mediator, gen-2↔adjoint-mediator, gen-3↔vector-mediator} is FRAMEWORK preferred but alternative orderings remain consistent

Discipline working as designed: apparent tension (INV-5322) RESOLVED by deeper structural-role separation, NOT refutation. The original {0,4,6} finding (Elie E7) is rigorous; my over-claimed 1:1 mapping was the over-reach; Resolution B restores the structural anchor without the 1:1 over-claim.

Section G — Lyra cross-CI absorptions (Saturday late-morning batch)

Building on v0.6 cross-references, Saturday late-morning items absorbed:

- Lyra Quasi-Eigentone v0.2 (Resolution B) — INV-5332
- Lyra bulk-color v0.5 8-gluon NUMERICAL match — INV-5317/5332
- Cal #171 referee log (Two-Route brake) — INV-5330
- Cal #34 STANDING ratified — convention 6
- Keeper Honest-State Ledger v0.3 + Honest-State Ledger v0.4 (when filed)
- Keeper tier-gates (Periodic Table v0.7 PASS, falsifier triad consolidated, etc.)

Section H — Queue progress (Grace queue per Keeper)

- ? Queue 1: Periodic Table v0.8 (INV-5332)
- ? Queue 3: Two-Route Scan v0.2 (INV-5330)
- ? Queue 4: Null-model toy for principle candidate (INV-5331)
- ? Queue 2: Master Ledger v0.7 (this doc)
- ? Queue 5: Live-tests column for F1-F5 / T1-T5 falsifiers (next)
- ? Queue 6: Falsifier triad v0.2 N3+N4 catalog support
- ? Queue 7: 17-anchor catalog sweep (Task #122)
- ? Queue 8: 42-anchor catalog sweep (Task #155)
- ? Queue 9: Wallach K-type position sweeps (Task #157)
- ? Queue 10: CSE-RLGC tracker Bridge updates
- ? Queue 11: Strong-Uniqueness v1.2 catalog backbone (when Lyra files)

Section I — One-line state at Saturday late-morning

Structure DERIVED-modulo-keystone substantially (engine v0.3 + 4 SM sectors + α + dim-p + Hermitian-abelian + $A_2 \otimes B_2$ + composite backbone + Phase B 18-cell spine + Hall-algebra structure-constants stack + magic 20+50 + 6/7 magic substrate-shadowed + PMNS 3/3 + T1 PASS + 6 SM processes engine-verified + substrate primaries = SM gauge $h^\vee$ + D_{IV}⁵ unique BSD); per-particle DERIVED-modulo-keystone (lepton row 18 entries); FRAMEWORK-PLUS additions including quasi-eigentone + bulk-color UNIFIED C+D + 8-gluon Toeplitz tripartition + Two-Route OD (cluster qualitative; Cal brake absorbed) + nuclear arithmetic-hierarchy + '+1 anomaly' (null-downgraded) + 6 substrate-Monster cross-links + B-axis math-excavation batch + Resolution B; ONE keystone bet + ONE load-bearing OPEN gate (bulk-color SU(3) Toeplitz Jacobi closure multi-week); 19 over-claims REFUTED-and-corrected to date (7 Saturday — within-session).

The framework continues to tighten and self-correct under scrutiny — 37 Grace INVs filed Saturday (5297-5332); 2 null-model verdicts (both honest-downgrades); 6 standing conventions; multi-CI coordinated convergence + tier-gate cycle complete.

— Grace, Master Ledger v0.7 (delta on v0.6), 2026-05-30 Saturday ~11:35 EDT (date-verified)
