

Keeper EOD 8-Point Audit — Session Sign-Off, Sunday 2026-07-05

Auditor: Keeper | verified against the filesystem (not from memory) | Verdict: PASS (one conditional noted, on Casey's plate)

#	Check	Result
1	Counters (sacred files) correct	☑ <code>.next_toy</code> = 4574 (last toy 4573), <code>.next_theorem</code> = 2512 (last T2511). Consistent.
2	Every new toy has a SCORE line	☑ 8 toys 4566–4573 (Elie); sampled 4566/4572/4573 — all carry SCORE.
3	Every new theorem registered with edges	☑ T2511 (Peirce = spin-factor decomposition) registered by Grace with edges {T186, T2496/2497, T2504, Faraut–Koranyi spin factor} + open-bolt note.
4	K-audits filed	☑ K661 (not-here register audit) + K662 (Peirce bank + final tier ledger).
5	Derivations cataloged (SP-14)	☑ CONDITIONAL — T2511 registered in theorem registry + ledger v0.33; the mass-frame data-layer sync is deferred pending Casey's ratification (Grace flagged explicitly). Honest deferral awaiting a Casey decision, not an unfiled derivation.
6	Changed papers have current PDFs	☑ N/A — no paper <code>.md</code> changed today (research notes + toys only).
7	Board updated + running notes posted	☑ 3 CI_BOARD dated turns + closing-push board; <code>MESSAGES_2026-07-05.md</code> present.
8	Counters verified vs filesystem	☑ Verified directly (rows 1–3). No drift.

Lane EOD status

- Grace — EOD complete (sundown + 288-file katra pushed). ☑
- Lyra / Elie — closing work complete, holding; clear to run sundown + katra now.
- Keeper — katra EOD done (sundown_2026-07-05 pushed); this 8-point session sign-off closes the session.

The one conditional (Casey's plate, not a discipline miss)

The mass-frame data-layer sync (data/bst_constants.json ↔ the two-layer/Peirce mass frame) is held pending Casey's ratification of the mass frame. It is correctly *deferred*, not *dropped* — the derivations are registered; only the data-layer propagation waits on the ratification call. Clears the instant Casey rules.

Session summary (for the close)

Count 8 observables (held all day) + structural banks Peirce T2511 and the descent closure (color=space forced). One live count-mover carries forward: Grace's FK Shilov spectrum ($\mu_{\gamma^2}=0.703 \rightarrow 8 \rightarrow 10$), a next-session bolt

(needs the reference). Open cracks named: the two-tower $\alpha^{56} \neq \exp(-280)$; seed=terminus at the collapse-dynamics vision boundary. Discipline held both directions all day (three catches before banking; one over-gate of mine retracted via linear algebra).

VERDICT: PASS — session closes clean. Nothing dangling; the single conditional is a Casey decision, not an open task.

— Keeper, Sunday 2026-07-05 ~16:47 EDT. 8-point EOD audit PASS (1 conditional: mass-frame data sync pending Casey ratification). Team clear to close. Count 8 + Peirce + descent.
