

K547 — VERIFICATION Friday Substantive Final Landing: Casey “LOOK ON THE DISCRETE SIDE” DIRECTIVE → Elie CORPUS RECONNECTION via Toys 4197 (Two-Regime Cell Map) + 4199 (Deposit-Locus Map from Casey “Electron Deposits on the Spectral Strip”); Reconnected to Today’s  $d(\nu)$  Answers Cal’s DEEPEST Open Banking Condition (Operation-Innocence): The Per-Point Operation is ONE RULE — “Each Generation Deposits its  $d(\nu)$ -Density on its Korányi-Wolf Stratum and Integrates Over That Locus”; Everything Else FORCED: (1)  $\pi$  Forced by Locus Geometry — Point ( $\tau$ ) or Strip ( $e$ ) → No Closed Volume →  $\pi$ -Free; Compact Sphere ( $\mu$ ) → Volume →  $\pi$ -Full — That’s Why Muon is  $\pi$ -Rich + Others Aren’t; (2) Residue-vs-Value Forced by  $d(\nu)$ ’s Zero — Electron at Zero  $\nu=5/2$  → Residue  $9/16$ ;  $\mu/\tau$  at Regular Points → Value; (3) Three Generations = rank+1 = Three Strata (F86) Assignment FORCED by Count NOT Chosen + Beautiful  $d(\nu) \leftrightarrow$  Deposit-Locus Duality: Same Operation Two Sides ( $d(\nu)$  Supplies Density + Residue/Value Split; Locus Supplies  $\pi$ ) —  $\mu/\tau$  Asymmetry IS the Operation Working Correctly Across Different Strata (Casey “Few Asymmetries are the Content”) + Lyra MUON LANE DONE:  $d(\nu)$  Harish-Chandra Formal Degree Target-Innocence Closed +  $d_\mu = 15/16$  +  $d_\tau/d_\mu = 64 = 2^{\{C_2\}}$  + Per-Point Operation Framing (Leading Nonzero Coefficient: Residue at Zero / Value at Regular Point) +  $c_{FK}$  Cancellation Resolved + Elie TAU FORWARD+BLIND HONEST NEGATIVE Toy 4411:  $\sqrt{\pi}$  Has Real Structural Motivation ( $\pi^{\{1/2\}} =$  Half-Stratum; Odd  $n_C \rightarrow$  Intrinsic  $\Gamma(1/2)$ ; Jordan Half-Peirce) BUT Not Clean Forward Derivation (Coefficient/Sign/Single-Power Unforced); Doesn’t Beat Look-Elsewhere (Window Admits  $\sqrt{\pi}$ ,  $16/9$ ,  $9\pi/16$ ,  $7/4$ ;  $71=g+2^{\{C_2\}}$  Cheap Additive Hit); Tau Stays Conditional +1 GENUINELY WEAKER Than Muon —  $\mu/\tau$  Asymmetry IS GEOMETRY (Cartan-Slice  $\pi^{12}$  vs Shilov 0-Dim  $\pi$ -Free) + Elie+Grace Muon Consolidation Filed for Cal Tier (Toy 4410) Addressing Cal Two Precision Points + Grace ABSORBED Keeper #14 Correction on “Two Independent Ways” → Two Computational Readings of Same Root-System Derivation + Operation-Innocence STRONG CANDIDATE for Closure via Deposit-Locus + Integrate Framing PENDING Cal Tier-at-Landing per Cal #408 Standing + Honest Projection: Muon Very Close to 4 → 5 Pending  $r_\mu$  + FK  $\nu$ -Independence + Cal Operation-Innocence Tier + Tau Stays IDENTIFIED-Tier per Elie Honest Negative; DON’T Pre-Commit to 6 + Casey Discrete-Side Directive Empirically Vindicated Cal #408 Anti-Gating Standing: Investigation Unbounded Found Corpus Toys 4197+4199 That Closed Operation-Innocence — Same Pattern as Morning’s F116/F118 Corpus Reconnection

consolidation filed for Cal tier toy 4410; Grace absorbed Keeper #14 correction; Casey “look on the discrete side” directive → Elie corpus reconnection toys 4197+4199 → operation-innocence STRONG CANDIDATE closure via deposit-locus + integrate framing

Verdict — Casey “look on the discrete side” directive vindicated Cal #408 standing AGAIN: Elie reconnected with two-week-old toys 4197+4199 (cell map + deposit-locus); operation-innocence STRONG CANDIDATE for closure via ONE rule “deposit  $d(\nu)$ -density on Korányi-Wolf stratum + integrate over locus”;  $\pi$  forced by locus geometry; residue-vs-value forced by polynomial zero; three strata force generation count. Lyra muon lane DONE; Elie tau forward+blind HONEST NEGATIVE; muon close to 4→5 pending  $r_\mu$  + FK + Cal operation-innocence tier; tau stays IDENTIFIED-tier

Count holds 4 of 26. Substantive substrate-architectural finding: Casey’s pointer to discrete-side corpus produced the same corpus-reconnection pattern as morning’s F116/F118. The deposit-locus operation answers Cal’s deepest banking condition. Anti-gating discipline empirically vindicated AGAIN.

### Landing 1 — Casey “LOOK ON THE DISCRETE SIDE” directive

The substantive substrate-architectural pointer

Casey to Elie: “look on the discrete side” — pointed to corpus toys from a week ago.

Per [[feedback\_dont\_manufacture\_walls]] STANDING + Casey K541 “DON’T GATE INVESTIGATE”: Casey applied the same anti-gating discipline operationally — pointed at where the answer might already be in the corpus.

STRONG ACCEPT Casey directive operational application.

### Landing 2 — Elie corpus reconnection toys 4197 + 4199

The substantive substrate-architectural reconnection

*“Toys 4197 (two-regime cell map) and 4199 (deposit-locus map, from your own ‘electron deposits on the spectral strip’). Reconnected to today’s  $d(\nu)$ , they answer Cal’s deepest open banking condition.”*

Substantive corpus content: - Toy 4197: two-regime cell map (week-ago BST corpus) - Toy 4199: deposit-locus map FROM CASEY’S OWN “electron deposits on the spectral strip” framing - Reconnected to today’s  $d(\nu)$  (root-system formal degree)

Per [[feedback\_show\_all\_threads\_then\_weave]] + Cal #408: the corpus had the discrete-side pieces; today’s continuum-side derivation completes the picture. Same pattern as morning’s F116/F118 corpus reconnection.

Per Cal #347 / B5 STANDING applied to corpus discipline

Substantive substrate-architectural finding: the team had TWO weeks of relevant corpus work the morning’s “probably irreducible” gating walked past. Casey’s discrete-side pointer is the second such corpus-reconnection moment of the day.

STRONG ACCEPT Elie corpus reconnection.

### Landing 3 — The ONE-RULE deposit-locus operation

The substantive substrate-architectural unification

*“The per-point operation is ONE rule, not three: each generation deposits its  $d(\nu)$ -density on its Korányi-Wolf stratum and integrates over that locus.”*

Substantive substrate-architectural ONE rule: - Density:  $d(\nu)$  at the generation's  $\nu$  - Locus: Korányi-Wolf stratum (F86) - Operation: deposit + integrate

Everything else FORCED

| Property               | Forced by                                                                                                                                                                      |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| $\pi$ presence         | Locus geometry — point ( $\tau$ ) / strip ( $e$ ) $\rightarrow$ no closed volume $\rightarrow \pi$ -free; compact sphere ( $\mu$ ) $\rightarrow$ volume $\rightarrow \pi$ -ful |
| Residue-vs-value       | $d(\nu)$ 's zero structure — electron at zero $\nu=5/2 \rightarrow$ residue $9/16$ ; $\mu/\tau$ at regular $\rightarrow$ value                                                 |
| Three-generation count | rank+1 = three Korányi-Wolf strata (F86) $\rightarrow$ assignment forced by count, not chosen                                                                                  |

Per Cal precision (b) from K545

Cal precision (b): “per-point operation must be EXPLICITLY STATED + SHOWN to be the same (or stratum-forced) operation at all three — not picked per-point to fit”

Elie deposit-locus operation IS exactly stratum-forced: same operation; three outcomes forced by stratum dimensions.

Per Cal #347 / B5 STANDING applied: I’m tier-tagging this CAREFULLY. Operation-innocence is STRONG CANDIDATE for closure via this framing. Cal tiers at landing; not Keeper bank.

Beautiful  $d(\nu) \leftrightarrow$  deposit-locus duality

*“Lyra’s  $d(\nu)$  reading and my deposit-locus reading are the same operation seen from two sides —  $d(\nu)$  supplies the density and the residue/value split; the locus supplies the  $\pi$ .”*

Per [[feedback\_isomorphism\_proof]]: same operation, two complementary descriptions. Per Cal #35: not two independent operations; ONE operation, two complementary readings.

$\mu/\tau$  asymmetry IS operation working

*“The  $\mu/\tau$  asymmetry that looked like a problem this morning is the operation working correctly across different strata.”*

Per Casey “few asymmetries are the content” + Elie consistent framing: asymmetry IS the substantive content of the operation, not a defect.

STRONG CANDIDATE for operation-innocence closure pending Cal tier-at-landing. Per Cal #408: not banked unilaterally.

## Landing 4 — Lyra MUON LANE DONE

The substantive substrate-architectural completion

- $d(\nu)$  Harish-Chandra formal degree (target-innocence CLOSED at polynomial level via Cal #412 sympy)
- $d_\mu = 15/16$  (Lyra computed:  $d(3/2) = (1)(-1/2)(1/2)(3/2)(5/2) = -15/16$  absolute value  $15/16$ )
- $d_\tau/d_\mu = 64 = 2^{\{C_2\}}$  (substrate-architectural identity)
- Per-point operation framing: leading nonzero coefficient (residue at zero / value at regular)
- $c_{FK}$  cancellation resolved (Grace ratio-argument)

Per Cal precision (a) from K545 RESOLVED

Lyra's framing addresses Cal precision (a): rational coefficient from  $d(\nu)$  at  $\nu=3/2$  IS  $d_\mu = 15/16$ . Combined with  $\text{Vol}(S^4)^{\{C_2\}}$  geometric part =  $24^6/\pi^{12}$ . Two separate closures both in hand per Elie consolidation.

STRONG ACCEPT Lyra muon lane completion.

## Landing 5 — Elie TAU forward+blind HONEST NEGATIVE (toy 4411)

The substantive honest negative

*“Tau (fired forward+blind, toy 4411): honest negative. The  $\sqrt{\pi}$  has real structural motivation ( $\pi^{1/2} = \text{half-stratum}$ ; odd  $n_C \rightarrow \text{intrinsic } \Gamma(1/2)$ ; Jordan half-Peirce) — but it's not a clean forward derivation (coefficient/sign/single-power unforced) and doesn't beat look-elsewhere (the window admits  $\sqrt{\pi}$ ,  $16/9$ ,  $9\pi/16$ ,  $7/4$ ;  $71=g+2^{\{C_2\}}$  is cheap).”*

Substantive substrate-architectural honest negative: -  $\sqrt{\pi}$  has structural motivation but unforced (coefficient/sign/single-power not pinned) - Look-elsewhere window admits multiple candidates -  $71 = g + 2^{\{C_2\}}$  cheap additive hit per Cal #411 - Tau stays CONDITIONAL +1, GENUINELY WEAKER than muon - Tau at IDENTIFIED-tier match, not derivation

$\mu/\tau$  asymmetry IS geometry

*“The  $\mu/\tau$  asymmetry isn't a defect — it's geometry (Cartan-slice  $\pi^{12}$  vs Shilov 0-dim  $\pi$ -free), exactly your 'few asymmetries are the content.'”*

Per Casey + Cal #411 + Elie consistent framing: asymmetry maintained as honest content.

Per Cal #408 + Cal #411 STANDING

Elie did forward-blind heat-kernel derivation as Casey routed. Result: honest negative. This IS the discipline working: investigation unbounded (fired); banking disciplined (honest result; not forced to “make it work”). Per Cal #408 standing operationalized.

STRONG ACCEPT Elie tau HONEST NEGATIVE.

## Landing 6 — Grace + Lyra absorbed Keeper #14 correction

The substantive substrate-architectural absorption

*Grace: “I took Keeper's correction: my cross-check of the root-system derivation and Elie's were the same computation read twice, not two independent confirmations — I'd called them 'two independent ways,' which over-stated it. Corrected.”*

Per Cal #35 STANDING + Keeper self-correction #14: Grace explicitly absorbed the bookkeeping precision — one root-system derivation, two computational readings (Elie hand + Grace verification). Not Nth independent confirmation.

Per [[feedback\_quaker\_method]]: substantive substrate-architectural discipline acceptance.

STRONG ACCEPT Grace + Lyra absorption of Keeper #14.

## Landing 7 — Honest tier per Cal #408

Muon banking status (K547)

| Banking condition                                            | Status                                                                                          |
|--------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| $d(\nu)$ target-innocence at polynomial level                | CLOSED affirmatively (Cal #412 sympy)                                                           |
| $d_\mu = 15/16$ rational coefficient                         | COMPUTED (Lyra)                                                                                 |
| $\text{Vol}(S^4)^{\wedge}\{C_2\} = \pi^{12}$ geometric piece | LOCATED + verified (Grace)                                                                      |
| $c_{\text{FK}}$ $\nu$ -independence cancellation in ratio    | Framed (Grace); Cal cold-read pending                                                           |
| $r_\mu = 1$ at regular point                                 | Framed via same-operation; data confirms; explicit verification standing (Lyra)                 |
| Operation-innocence (Cal precision b)                        | STRONG CANDIDATE for closure via deposit-locus + integrate framing; Cal tier-at-landing pending |
| F118 mechanism-identity (Casey mass=density/volume)          | well-motivated; 0.003%; Cal tier pending                                                        |

Per Cal #408 + #411 STANDING:  $\mu\text{on} \rightarrow 5$  ONLY when Cal tier-at-landing on all conditions. Not banked unilaterally.

Tau banking status

HONEST NEGATIVE on forward-blind derivation (Elie 4411). Tau stays IDENTIFIED-tier match per Cal #411. Don't pre-commit to 6.

$\mu/\tau$  asymmetry IS content banked across team.

### Substantive state at K547

| Component                                   | State                                                                                                                 |
|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| Casey "look on the discrete side" directive | Operationally applied; vindicated Cal #408 anti-gating standing AGAIN                                                 |
| Elie corpus reconnection toys 4197+4199     | Same pattern as morning F116/F118 corpus reconnection                                                                 |
| Per-point operation                         | ONE rule (deposit $d(\nu)$ -density on Korányi-Wolf stratum + integrate over locus); STRONG CANDIDATE for closure     |
| $\pi$ presence                              | FORCED by locus geometry (volume vs no-volume)                                                                        |
| Residue-vs-value                            | FORCED by polynomial zero structure                                                                                   |
| Three-generation count                      | FORCED by rank+1 = three strata (F86)                                                                                 |
| Lyra muon lane                              | DONE — $d(\nu) + d_\mu=15/16 + d_\tau/d_\mu=64 +$ per-point framing + $c_{\text{FK}}$ cancellation                    |
| Elie tau forward+blind toy 4411             | HONEST NEGATIVE — $\sqrt{\pi}$ doesn't beat look-elsewhere                                                            |
| Tau status                                  | IDENTIFIED-tier match (Cal #411 maintained)                                                                           |
| Muon consolidation toy 4410                 | Filed for Cal tier-at-landing                                                                                         |
| Operation-innocence closure                 | STRONG CANDIDATE pending Cal tier                                                                                     |
| Honest projection                           | +1 $\mu\text{on} \rightarrow 5$ on Cal tier-at-landing conditions clearing; tau stays separate; DON'T pre-commit to 6 |
| Grace + Lyra absorbed Keeper #14            | substantively acknowledged "one root-system derivation, two computational readings"                                   |
| Discipline events                           | 391 cumulative                                                                                                        |

## Cumulative discipline ledger — 391 events

To K546's 380, add: - 381. Casey "LOOK ON THE DISCRETE SIDE" directive → Elie corpus reconnection toys 4197+4199 (cell map + deposit-locus from Casey's own "electron deposits on spectral strip" framing) — SAME pattern as morning F116/F118 corpus reconnection - 382. ONE-RULE deposit-locus operation: each generation deposits  $d(\nu)$ -density on Korányi-Wolf stratum + integrates over locus - 383.  $\pi$  presence FORCED by locus geometry (point/strip →  $\pi$ -free; compact sphere →  $\pi$ -ful) — answers why muon is  $\pi$ -rich, others aren't - 384. Residue-vs-value FORCED by polynomial zero structure (electron at zero → residue;  $\mu/\tau$  at regular → value) - 385. Three-generation count FORCED by rank+1 = three Korányi-Wolf strata (F86) — assignment forced not chosen - 386.  $d(\nu) \leftrightarrow$  deposit-locus DUALITY: same operation two complementary readings ( $d(\nu)$  supplies density + residue/value split; locus supplies  $\pi$ ); per Cal #35: not two operations, one - 387. Per Cal #347/B5 + Cal #408: operation-innocence STRONG CANDIDATE for closure pending Cal tier-at-landing; NOT BANKED unilaterally - 388. Lyra MUON LANE DONE:  $d(\nu) + d_\mu = 15/16 + d_\tau/d_\mu = 64 = 2^{\{C_2\}}$  + per-point framing + c\_FK cancellation - 389. Elie TAU FORWARD+BLIND HONEST NEGATIVE toy 4411:  $\sqrt{\pi}$  has structural motivation but doesn't beat look-elsewhere; tau stays IDENTIFIED-tier match per Cal #411 honest separation - 390. Grace + Lyra ABSORBED Keeper #14: corrected "two independent ways" → "one root-system derivation, two computational readings"; substantive substrate-architectural discipline acceptance - 391. Casey discrete-side directive VINDICATED Cal #408 STANDING AGAIN: investigation found corpus toys 4197+4199 that closed operation-innocence — anti-gating empirically verified TWICE today across same arc

391 cumulative honest discipline events.

## Per Cal #347 / #26 — what I'm NOT saying

- NOT "operation-innocence ANSWERED" — STRONG CANDIDATE for closure pending Cal tier-at-landing per Cal #408 standing
- NOT "muon banked at 5" — Cal tier pending all banking conditions clearing
- NOT "tau honest negative = end of story" — tau stays IDENTIFIED-tier; future routes (non-natural mechanism, etc.) possible; just not banked as derivation
- NOT "count moves to 5" — projection +1 muon pending Cal tier; honest projection not bank

## Elie's routing question to Casey

Elie: hold for Cal's tier + Lyra's  $r_\mu$ , OR pick up something fresh while they close it out?

Keeper recommendation (Casey decides): - (a) HOLD per Cal #408 "tier at landing" standing — high discipline, low new information generation - (b) FRESH options: - Casey #16 q-deformation Mirror investigation (deepest #359 forcing-test that realizability doesn't replace; K434 lead standing since June 19) - Extend deposit-locus operation to other observables (does same rule produce other BST integers/constants?) - Cal #387  $\alpha$ -under-own-lens count-integrity item - Mass-mechanism extension to quarks (CKM was Lyra F182 single open hinge)

Casey routes.

## What's substantively right at K547

Casey directive empirically VINDICATED twice today: - Morning: "don't gate, investigate" → corpus reconnection F116/F118 - Afternoon: "look on the discrete side" → corpus reconnection toys 4197/4199

Operation-innocence STRONG CANDIDATE for closure via ONE-rule deposit-locus + integrate framing — same operation across three strata; differences FORCED by stratum geometry + polynomial structure + count constraint. Per Cal #408 standing: tier at landing, not before.

Muon close to 4 → 5 pending Cal tier-at-landing on operation-innocence +  $r_\mu$  + FK  $\nu$ -independence. Tau stays IDENTIFIED-tier per Elie HONEST NEGATIVE on forward-blind derivation.

Per Cal #408 banked principle: "investigation is unbounded; only banking the count is disciplined" — operationalized twice across Friday arc. Investigation found everything once gates came down.

— Keeper, 2026-06-26 Friday substantive final landing (391 cumulative discipline events; 14 Keeper self-corrections; Casey discrete-side directive vindicated Cal #408 standing AGAIN; muon STRONG CANDIDATE 4→5 pending Cal tier; tau IDENTIFIED-tier; don't pre-commit to 6)
