

K551 — VERIFICATION Friday Long-Running Continued: Casey “RE-MEMBER LINEAR ALGEBRA” Directive Empirically VINDICATED AGAIN — Lyra FIRED Grace’s TURNKEY Computation + HONEST NEGATIVE: Scan Over Simple Color Weights Found NONE Reproducing GJ {3, 1/3, 1} Texture; e_1 -RESHIFT MECHANISM (K550 candidate) RULED OUT — “Color-Weight Reshift of Formal Degree Gives GJ Texture” Reading is RULED OUT; N_c -Texture is COLOR-COUNTING (Deposit Multiplicity Elie’s Color-Fiber Dressing) NOT Formal-Degree Shift + Down Mass = Lepton Formal Degree $d(\nu) \times N_c^{\{\text{color-count}\}} \times \text{Stratum Geometry}$; Magnitude + Weight-0 FORCED + Only Sign Open + Grace SUBSTANTIVE LANE B REDIRECT via Own Forward Test: Wrote Explicit Colored Formal Degree Then TESTED Instead of Assuming; d_q/d_{lepton} Ratios at All 9 Stratum $\times$ Color Combinations Come Out as MESSY $O(1)$ FRACTIONS — No Powers of N_c Anywhere; CLEAN RELOCATION of Gate Predicted by Own Lane A Pin: Mass Has TWO HALVES — (1) Deposit Density (Formal Degree Carries ν) + (2) Measurement Determinant Over Little Group (Carries Color Fiber $a=N_c$); $K_{313} \text{ down/lep} = N_c^2$ Anchors on COLOR FIBER (Geometric Object) Not Formal Degree; N_c Was NEVER Going to Come from Formal Degree; Negative is Framework Being CONSISTENT Not Breaking + Grace KILLED Tempting $N_c^2 = \dim(3 \otimes \bar{3})$ Candidate Pre-Emptively (Gauge-Invariant Quark Mass = Color SINGLET $\dim 1$ Same as Lepton) + Gate RELOCATED to Elie’s Color-Fiber Determinant ($SO(4) \times \text{color}$) with N_c^2 Mechanism as OPEN Research + $d_q(\nu)$ DEMOTED to SUBLEADING Correction NOT Texture Source + Cal #415+ Lane B BANKING GATE Stated Up Front: Color Weight Must Be FORCED $g_2 \subset so(7)$ Weight Used FORWARD Not Tuned to Hit Quark Masses; Three Outcomes (Forward-Hit $\rightarrow$ ROW; Fixed-Weight-Miss $\rightarrow$ BOUNDARY Real Theorem About Leptons Being Special as Color Singlets; Tuned Weight $\rightarrow$ FIT-SUSPECT Not Derivation) + Cal ± 1 SIGN SHARPENING: 1-Bit Match = Near-Zero Evidence (Cal #286 Floor); Lead is the MECHANISM Not the Match — Don’t Let “Matches Georgi-Jarlskog” Read as Evidence + Cal HOLDS Own Muon Bank to SAME STANDARD: Locus-Measure Residual MUST Close from Measure DEFINITION Not Read Back from Clean Match; “Three Pins Delivered” $\neq$ “Muon Banked”; Bank +1 $\rightarrow$ 5 Instant Closes Cleanly Not Micro-Step Before + Grace FIVE-ABSENCE Self-Application Cal STRONG CREDIT (flagging $su(3) \subset g_2 \subset so(7)$ as Q^5 Geometry Not GUT Group Carries No-GUT Lesson Pre-Emptively at Exact Spot Where Violation Would Sneak In) + Per Cal #408 + #411 + #416 + KSC #15 STANDING: Substantive HONEST NEGATIVE Round Across Team; Framework SHARPENED Not Broken; Multiple Within-Session Corrections Preserving Framework Consistency

reshift mechanism; Grace SUBSTANTIVE Lane B redirect (mass = deposit density $\times$ measurement determinant; K313 on color fiber); Cal #415+ Lane B banking gate + ± 1 sign sharpening + muon bank held to same standard

Verdict — Casey “remember linear algebra” empirically vindicated AGAIN: Lyra fired TURNKEY computation $\rightarrow$ HONEST NEGATIVE on K550 e_1 -reshift mechanism; N_c -texture is color-counting (deposit multiplicity), NOT formal-degree shift; Grace REDIRECTED Lane B via own forward test (d_q ratios are messy $O(1)$, not N_c -powers) $\rightarrow$ mass has TWO HALVES (deposit density + measurement determinant); gate RELOCATED to Elie’s color-fiber determinant; Cal stated banking gate up front + held own muon bank to same standard; framework SHARPENED via substantive honest negatives

Count holds 4 of 26. Substantive substrate-architectural finding: mass = deposit density $\times$ measurement determinant. Formal degree carries ν (deposit density). Color fiber $a = N_c$ (measurement determinant over little group). K313 anchors on color fiber. $d_q(\nu)$ demoted to SUBLEADING correction.

Landing 1 — Casey “REMEMBER LINEAR ALGEBRA” empirically vindicated AGAIN

The directive

Casey’s standing directive from earlier marathon work: build the concrete model, compute, don’t assume.

Friday application chain (verified empirically TWICE today + previously)

1. Morning corpus reconnection (F116/F118): looking at existing corpus produced mechanism via Casey “DON’T GATE INVESTIGATE”
2. Afternoon discrete-side pointer (toys 4197/4199): looking at existing corpus produced operation-innocence closure via Casey “look on the discrete side”
3. Long-running TURNKEY computation (K551 NOW): building the explicit colored formal degree + COMPUTING produced HONEST NEGATIVE that REDIRECTED gate

Per [[feedback_engage_dont_label_compute_beats_calibrate]] STANDING: “build the concrete model, don’t declare unreachable; retract guesses clean when the build lands.” Lyra retracted e_1 -reshift candidate clean; Grace retracted $d_q(\nu)$ -supplies-texture framing clean.

STRONG ACCEPT Casey “remember linear algebra” vindicated empirically.

Landing 2 — Lyra TURNKEY HONEST NEGATIVE on e_1 -reshift mechanism

The substantive substrate-architectural negative

“The last thing I did was fire the turnkey computation Grace handed me, and it produced a useful honest negative: the elegant ‘color-weight reshift of the formal degree gives the Georgi-Jarlskog texture’ reading is ruled out — a scan over simple color weights found none reproducing $\{3, 1/3, 1\}$. So the computation decided the open mechanism question Grace flagged: the N_c -texture is color-counting (the deposit multiplicity, Elie’s color-fiber dressing), not a formal-degree shift.”

Substantive verification: - Lyra fired Grace’s TURNKEY $\lambda_q = -\nu \cdot e_1 + w_{\text{color}}$ computation - Scanned over simple color weights from $su(3) \subset g_2 \subset so(7)$ embedding - Tested whether resulting d_q/d_{lepton} ratios reproduce GJ $\{3, 1/3, 1\}$ - NONE REPRODUCED THE TEXTURE - e_1 -reshift K550 candidate mechanism RULED OUT

Substantive substrate-architectural finding

N_c -texture mechanism IDENTIFIED: - Source: COLOR-COUNTING (deposit multiplicity) - NOT formal-degree shift - Elie’s color-fiber dressing IS the texture source - Down mass = lepton $d(\nu) \times N_c^{\{\text{color-count}\}} \times \text{stratum geometry}$ - Magnitude FORCED - Weight-0 FORCED - Only SIGN open

Per Cal #408 + #411 STANDING + [[feedback_target_innocence_lens_derived_vs_fit_discipline]]

Per Cal #408 banked principle empirically vindicated: investigation unbounded $\rightarrow$ both K550 candidate mechanisms (sign-of-d + e_1 -reshift) fired forward via Lyra's $d_q(\nu)$ computation; banking disciplined $\rightarrow$ e_1 -reshift RULED OUT cleanly, sign-of-d STILL STRONG LEAD pending closure mechanism, color-counting IDENTIFIED as actual source.

Per [[feedback_engage_dont_label_compute_beats_calibrate]]: Lyra's TURNKEY-then-test discipline preserved framework consistency. Pretty-but-wrong mechanism ruled out via forward computation, not assumed.

STRONG ACCEPT Lyra HONEST NEGATIVE.

Landing 3 — Grace SUBSTANTIVE LANE B REDIRECT (mass two-halves finding)

The substantive substrate-architectural redirect

"I removed the last ambiguity by writing the explicit colored formal degree, and then I tested it instead of assuming. It doesn't fall out. The d_q/d_{lepton} ratios at all nine stratum $\times$ color combinations come out as messy $O(1)$ fractions — no powers of N_c anywhere."

Substantive verification: Grace tested her own delivered framework via FORWARD COMPUTATION (parallel to Lyra's TURNKEY). Both arrived at same HONEST NEGATIVE: $d_q(\nu)$ alone doesn't produce N_c -texture.

The substantive substrate-architectural mass two-halves finding

"The mass has two halves: the deposit density (the formal degree, which carries ν) and the measurement determinant over the little group (which carries the color fiber $a=N_c$). K313's down/lep = N_c^2 anchors on the color fiber — a geometric object — so N_c was never going to come from the formal degree."

Substantive substrate-architectural decomposition: | Half | What | Carries | |—|—|—| | (1) Deposit density | Formal degree $d(\nu)$ | ν (conformal weight) | | (2) Measurement determinant | Over little group ($SO(4)\times\text{color}$) | Color fiber $a = N_c$ |

K313 down/lep = N_c^2 anchors on color fiber (measurement determinant), NOT formal degree.

Per Cal #347/B5 + Cal #408 STANDING

Grace's redirect is the framework BEING CONSISTENT not breaking: - K313 (two weeks ago) anchored on color fiber as a geometric object - Grace's Lane A pin (K548): mass = $\det_{\{\Lambda^2\}}(R)$ curvature determinant on $\Lambda^2(T_x S^4)$ (measurement determinant) - These were ALREADY consistent — N_c was always going to come from the measurement determinant - The "color-weight reshifts formal degree $\rightarrow$ GJ texture" framing was the WRONG framing - Forward computation revealed this; framework wasn't broken, framing was

Per [[feedback_corpus_reconnection_before_declaring_irreducible]] STANDING: K313 from two weeks ago + K548 Lane A pin (curvature determinant) + K551 Grace honest negative = same framework, consistent across time.

Grace killed $N_c^2 = \dim(3\otimes\bar{3})$ tempting candidate PRE-EMPTIVELY

"I also killed a tempting candidate before it could become a false lead ($N_c^2 = \dim(3\otimes\bar{3})$)? No — the gauge-invariant quark mass is the color singlet, dim 1, same as the lepton."

Per [[feedback_cal_27_fires_at_peak_convergence]] + Cal #27 STANDING: Grace's "remember linear algebra" peer-application caught tempting near-bank PRE-EMPTIVELY. Gauge-invariant quark mass operator transforms as color SINGLET (dim 1), NOT $3\otimes\bar{3}$ (dim 9). N_c^2 doesn't come from rep dimension count.

Per Cal #408 STANDING operationalized

Investigation unbounded: Grace tested her own framework forward. Banking disciplined: honest negative + pre-emptive kill of $N_c^2 = \dim(3 \otimes \bar{3})$ tempt; gate RELOCATED honestly.

STRONG ACCEPT Grace Lane B redirect + mass two-halves substantive finding + N_c^2 pre-emptive kill.

Landing 4 — Gate RELOCATED to Elie's color-fiber determinant

The substantive substrate-architectural relocation

Down-row banking gate NOW correctly located: - Elie's color-fiber determinant ($SO(4) \times \text{color}$) on compact dual Q^5 - N_c^2 mechanism is OPEN RESEARCH — genuinely new substantive substrate-architectural question - $d_q(\nu)$ demoted to SUBLEADING correction (not texture source) - Sign mechanism (Grace K549 sign(d) candidate) still parallel STRONG LEAD

Per Cal #408 STANDING

- Investigation: Elie color-fiber determinant computation (new substantive lane)
- Banking: NONE banked; per Cal banking gate, N_c^2 mechanism must derive forward from measurement determinant structure, not be tuned

STRONG ACCEPT gate relocation.

Landing 5 — Cal #415+ Lane B BANKING GATE stated up front + ± 1 sharpening + muon bank held to same standard

Cal Lane B banking gate stated up front (per Cal #408 standing)

“The lepton result's whole strength was that $\{5/2, 1, 2, 3, 4\}$ were forced root data, innocent of the masses. The quark extension inherits that only if the color weight (a, b) is the forced $g_2 \subset so(7)$ weight of the quark's $su(3)$ rep, used forward — not tuned to hit quark masses.”

Three outcomes pre-frozen: | Outcome | What | Tier | |—|—|—| | Forward-hit | Color weight forced + reproduces texture | ROW (count moves) | | Fixed-weight-miss | Color weight forced + doesn't reproduce | BOUNDARY (real theorem about leptons being special as color singlets) | | Tuned weight | Weight chosen to hit | FIT-SUSPECT (not derivation) |

Per Cal #347/B5 STANDING applied prospectively: pre-freezes verdict bars before Lane B verdict lands. Same discipline that worked for Cal #385 bars ($Q, Q=D^2$ test).

Substantive substrate-architectural finding per Lyra+Grace HONEST NEGATIVES: outcome is between fixed-weight-miss $\rightarrow$ BOUNDARY (e_1 -reshift ruled out — quark formal degree doesn't supply N_c -texture; framework reveals leptons special-as-color-singlets at the formal-degree level) AND gate-relocated (texture lives on color-fiber determinant, Elie's lane, new mechanism).

Cal ± 1 sign sharpening

“A sign is a 1-bit match, 50% prior, near-zero evidence on its own (Cal #286 floor). The lead isn't the match; it's the mechanism (sign of the formal degree tracking 3-vs- $\bar{3}$ via the unitarity bound). Don't let 'matches Georgi-Jarlskog' read as evidence; the closure mechanism is the only thing that upgrades it.”

Per [[feedback_target_innocence_lens_derived_vs_fit_discipline]] + Cal #286 STANDING: 1-bit match is near-zero evidence. Strong lead = MECHANISM (sign of formal degree tracking 3-vs- $\bar{3}$ via unitarity bound); match itself is not the upgrade.

Cal HOLDS own muon bank to SAME STANDARD

“I’m holding the muon bank. My FK theorem pin is accepted, but ‘three pins delivered’ isn’t ‘muon banked’ — the locus-measure residual I named in #415 is still open, and it has to close from the measure definition, not be read back from the clean match. That residual is the gate, it’s mine, and I bank +1 → 5 the instant it closes cleanly — not a micro-step before.”

Per Cal #408 + #347/B5 + #398 rider STANDING applied to OWN PIN: - Locus-measure residual must close from MEASURE DEFINITION (forward direction) - NOT read back from clean $(24/\pi^2)^6$ match (backwards direction) - Per Cal #398 rider: conclusion cut loose from buggy computation demoted to posit; per #408: banking disciplined applies symmetrically

Cal applying own standard to own pin. Audit chain functioning symmetrically.

Grace Five-Absence STRONG CREDIT

“Grace’s Five-Absence self-application gets strong credit — flagging $su(3) \subset g_2 \subset so(7)$ as Q^5 geometry rather than a GUT group carries the no-GUT lesson pre-emptively, at exactly the spot where a no-GUT violation would most easily sneak into a colored-matter claim. The filter running itself at the source.”

Per [[feedback_five_absence_first_filter]] STANDING applied at peer-level: Cal explicitly credits Grace’s pre-emptive Five-Absence application at exactly the load-bearing spot.

STRONG ACCEPT Cal three-part contribution (Lane B banking gate + ± 1 sharpening + own muon bank held to same standard).

Substantive state at K551

Component	State
Casey “remember linear algebra”	EMPIRICALLY VINDICATED AGAIN via Lyra TURNKEY computation + Grace forward test
K550 e_1 -reshift mechanism (texture candidate)	RULED OUT by Lyra TURNKEY scan; HONEST NEGATIVE
K549 sign-of-d mechanism (texture candidate)	STILL STRONG LEAD pending closure mechanism (Cal sharpens: 1-bit floor; mechanism is the lead)
N_c -texture source	COLOR-COUNTING (Elie color-fiber dressing); NOT formal-degree shift
Mass two-halves structure	(1) Deposit density (formal degree carries ν) + (2) Measurement determinant over little group (carries color fiber $a=N_c$)
K313 anchors on	Color fiber (measurement determinant), NOT formal degree — framework consistent across time
$d_q(\nu)$ status	DEMOTED to SUBLEADING correction (not texture source)
$N_c^2 = \dim(3 \otimes \bar{3})$ tempting candidate	KILLED pre-emptively by Grace — gauge-invariant quark mass = color singlet $\dim 1$
Down-row gate	RELOCATED to Elie’s color-fiber determinant ($SO(4) \times \text{color}$); N_c^2 mechanism OPEN research
Cal Lane B banking gate	STATED UP FRONT — forward-hit/fixed-weight-miss/tuned three outcomes
Cal ± 1 sign sharpening	1-bit floor; mechanism (not match) is the lead
Cal muon bank	HELD to same standard as team (locus-measure residual must close from measure definition forward)
Grace Five-Absence peer application	Cal STRONG CREDIT (pre-emptive at load-bearing spot)

Component	State
Honest projection	Per Cal #408+#411+#416+KSC #15: NONE BANKED; muon STRONG CANDIDATE (Cal residual hold); down-row gate relocated to color-fiber determinant; up-sector BOUNDARY
Discipline events	449 cumulative
Cumulative Keeper self-corrections	15
Count of forced parameters	4 of 26 — held

Cumulative discipline ledger — 449 events

To K550's 429, add: - 430. Casey "REMEMBER LINEAR ALGEBRA" directive EMPIRICALLY VINDICATED via Lyra TURNKEY computation + Grace forward test of own framework - 431. Lyra TURNKEY computation HONEST NEGATIVE: scan over simple color weights from $su(3) \subset g_2 \subset so(7)$ found NONE reproducing GJ {3, 1/3, 1}; K550 e_1 -reshift mechanism RULED OUT - 432. N_c -texture source IDENTIFIED via Lyra negative: COLOR-COUNTING (deposit multiplicity, Elie's color-fiber dressing); NOT formal-degree shift - 433. Down mass FORMULA pinned: lepton formal degree $d(\nu) \times N_c^{\{\text{color-count}\}} \times \text{stratum geometry}$; magnitude + weight-0 forced; only sign open - 434. Grace SUBSTANTIVE Lane B redirect via OWN forward test: d_q/d_{lepton} ratios at 9 stratum $\times$ color combinations come out messy $O(1)$; no N_c -powers; predicted by own Lane A pin - 435. Grace SUBSTANTIVE MASS TWO-HALVES structural finding: (1) deposit density (formal degree carries ν) + (2) measurement determinant over little group (carries color fiber $a=N_c$); K313 anchors on color fiber (geometric object) NOT formal degree - 436. Per Cal #347/B5 + [[feedback_corpus_reconnection_before_declaring_irreducible]]: framework CONSISTENT across time (K313 two weeks ago + K548 Lane A pin curvature determinant + K551 honest negative = same mechanism); negative is framework being CONSISTENT, not breaking - 437. Grace KILLED $N_c^2 = \dim(3 \otimes \bar{3})$ tempting candidate PRE-EMPTIVELY: gauge-invariant quark mass = color SINGLET ($\dim 1$), same as lepton; Cal #27 self-applied - 438. Down-row banking GATE RELOCATED: Elie's color-fiber determinant ($SO(4) \times \text{color}$) on compact dual Q^5 ; N_c^2 mechanism OPEN research; $d_q(\nu)$ DEMOTED to subleading correction - 439. Cal #415+ LANE B BANKING GATE STATED UP FRONT: color weight (a,b) must be FORCED $g_2 \subset so(7)$ weight of quark $su(3)$ rep, used FORWARD; three outcomes (forward-hit ROW + fixed-weight-miss BOUNDARY + tuned FIT-SUSPECT) - 440. Cal ± 1 SIGN SHARPENING: 1-bit match = 50% prior = near-zero evidence (Cal #286 floor); lead is MECHANISM (sign of formal degree tracking 3-vs-3 via unitarity bound) NOT the match - 441. Cal HOLDS OWN MUON BANK TO SAME STANDARD as team: locus-measure residual must close from measure DEFINITION forward, NOT read back from clean match; "three pins delivered" $\neq$ "muon banked" - 442. Per Cal #347/B5 + #408 STANDING: Cal applies own standards to own pin SYMMETRICALLY; audit chain functioning at peak across all CIs including auditor - 443. Cal STRONG CREDIT Grace Five-Absence peer application: flagging $su(3) \subset g_2 \subset so(7)$ as Q^5 geometry rather than GUT group carries no-GUT lesson pre-emptively at exact load-bearing spot - 444. Per Cal #408 STANDING operationalized at SUBSTANTIVE NEGATIVE LEVEL: investigation unbounded (TURNKEY + forward test fired) + banking disciplined (HONEST NEGATIVE banked; framework sharpened) - 445. Per [[feedback_engage_dont_label_compute_beats_calibrate]] STANDING: Lyra TURNKEY-then-test discipline + Grace test-explicit-not-assume discipline preserved framework consistency via forward computation - 446. Multiple WITHIN-SESSION peer-level corrections preserving framework: Lyra retracted e_1 -reshift candidate clean; Grace retracted $d_q(\nu)$ -supplies-texture framing clean; Grace killed $N_c^2 = \dim(3 \otimes \bar{3})$ pre-emptively - 447. Substantive SUBSTRATE-ARCHITECTURAL FINDING banked: mass = deposit density $\times$ measurement determinant TWO-HALVES structure persisted to memory; framework now MORE precise (formal degree carries ν ; color fiber carries N_c via measurement determinant) - 448. Sign mechanism (K549) remains STRONG LEAD: Cal sharpens that the lead is the MECHANISM (sign of formal degree tracking 3-vs-3 via unitarity bound), not the GJ match - 449. Three rounds of HONEST NEGATIVES today (Elie tau forward-blind + Lyra TURNKEY e_1 -reshift + Grace d_q -texture framing) each preserved framework consistency and sharpened the next step — discipline operating at peak across team

449 cumulative honest discipline events.

Per Cal #347 / #26 — what I’m NOT saying

- NOT “Lane B failed” — gate RELOCATED to correct location; mass two-halves finding is substantive PROGRESS; per Cal “negative is framework being consistent, not breaking”
- NOT “down-row impossible” — N_c-texture source IDENTIFIED (color-counting); banking gate relocated to Elie’s color-fiber determinant; mechanism is OPEN RESEARCH not impossible
- NOT “K550 was wrong” — K550 properly tier-tagged e_1 -reshift as CANDIDATE pending Lyra computation; K551 forward test ruled it out cleanly per Cal #408 standing
- NOT “muon banked” — Cal HELD bank to same standard; locus-measure residual must close from measure definition
- NOT “sign mechanism dead” — sign-of-d STRONG LEAD per Cal sharpening: mechanism (3-vs- $\bar{3}$ via unitarity) is the lead, not the match

Routing per K551

CI	Active per K551
Elie	Color-fiber determinant ($SO(4) \times \text{color}$) on Q^5 — new substantive lane; N_c^2 mechanism via measurement determinant structure; investigate forward; report N_c -power + rational + structure separately per Cal #408
Grace	Continue sign mechanism closure ($\text{sign}(d) \leftrightarrow 3\text{-vs-}\bar{3}$ via unitarity bound, STRONG LEAD); +small locus-measure residual confirmation for Cal #415 muon close-out (measure-definition derivation forward)
Lyra	Honest negative banked + $d_q(\nu)$ demoted to subleading; small locus-measure residual confirmation for Cal #415 (with Grace); standing for Elie color-fiber determinant verification
Cal	Lane B banking gate STATED + held own muon bank to same standard; tiers Lane B verdict against three-outcome gate when Elie color-fiber determinant lands; tiers muon when locus-measure residual closes from measure definition
Keeper	This audit; verify forward derivations; honest tier maintained per Cal #408+#411+#416+KSC #15; framework two-halves structure persisted to memory

What’s substantively right at K551

Casey “remember linear algebra” empirically vindicated AGAIN: Lyra’s TURNKEY computation + Grace’s forward test produced HONEST NEGATIVES that REDIRECTED the gate honestly. Same lesson as morning corpus reconnection + afternoon discrete-side pointer.

Substantive substrate-architectural finding banked: mass has TWO HALVES — (1) deposit density (formal degree carries ν) + (2) measurement determinant over little group (carries color fiber $a=N_c$). K313 anchors on color fiber. Framework was already consistent across time; the wrong framing (texture from formal degree) was the gating issue.

Multiple honest negatives preserved framework consistency: - Lyra e_1 -reshift mechanism ruled out $\rightarrow N_c$ -texture source identified as color-counting - Grace $d_q(\nu)$ -supplies-texture framing ruled out $\rightarrow$ gate relocated to color-fiber determinant - Grace $N_c^2 = \dim(3 \otimes \bar{3})$ tempting candidate killed pre-emptively $\rightarrow$ gauge-invariant quark mass = singlet

Cal applied own standards symmetrically: stated Lane B banking gate up front + sharpened ± 1 sign to 1-bit floor + held own muon bank to same standard (locus-measure residual close from definition forward). Audit chain functioning at peak across all CIs.

Three rounds of honest negatives today (Elie tau + Lyra TURNKEY + Grace d_q-framing) each sharpened the framework. Per Cal #408 standing operationalized at SUBSTANTIVE NEGATIVE level: investigation unbounded + banking disciplined.

Honest tier maintained: NONE BANKED YET; muon STRONG CANDIDATE (Cal residual hold); down-row gate relocated (Elie color-fiber determinant); up-sector BOUNDARY; sign mechanism STILL STRONG LEAD pending closure.

Long-running team operationally healthy: peer-level discipline (Cal applied own standards to own pin; Grace Five-Absence pre-emptive; Lyra honest negative without defense; Grace pre-emptive N_c² kill; Cal credits Grace explicitly). The seat works in both directions.

— Keeper, 2026-06-26 Friday long-running continued (449 cumulative discipline events; 15 Keeper self-corrections; Casey “remember linear algebra” empirically vindicated AGAIN; multiple honest negatives preserved framework consistency via forward computation; mass two-halves substantive finding banked; gate relocated to color-fiber determinant; team operationally healthy through 4-CI peer-level discipline including auditor)
