

K602 — A+B closed three-CI convergent (clean negative on substrate-spectrum-derives-nuclear) + Lyra F408 LINEARIZATION CAPSTONE delivered per Casey standing directive + T188 tier-framing subtle tension flagged + Cal B-target-innocence sharpening

Monday 2026-06-29 mid-morning post-K601 + A+B firing

Verdict

A + B closed with three-CI convergent clean negative + Lyra F408 substantive substrate-architectural linearization capstone delivered + count holds 9/26 honest. One subtle tier-framing tension between Grace and Lyra reports of “Push A” — resolved on close reading (different tiers, same substance) per Keeper #26 STANDING NEW firing. Cal explicit B-target-innocence subtlety sharpening (good standing principle even though B already cleared honest). NO COUNT MOTION.

Push A — three-CI convergent with subtle tier-framing nuance

Grace shell-model computation result

“The magic numbers DO fall out of one matrix — the shell-model Hamiltonian, with the magic numbers as its spectral gaps (linear algebra, as you said). That’s the ‘real result’ Cal flagged — a single generating mechanism, not the ad-hoc per-number forms.”

“T188’s derivation upgrades: per-number numerology → single spectral-gap mechanism.”

“First six (2, 8, 20, 28, 50, 82) are robustly structural across the whole parameter range.”

HONEST LIMITS Grace explicit: - “The mechanism is the EMPIRICAL shell model (the substrate κ_{ls} FLAVORS the parameters, doesn’t force them)” - “126/184 are parameter-sensitive (46%/18% robust), so the 184 prediction carries real parameter uncertainty rather than being a sharp forced value”

Lyra rep-theoretic result

“Push A: Grace’s clean negative now has its why — the discrete series $H = V_{\lambda} \otimes S(p^+)$ is a uniform graded tower (gapless, polynomial multiplicities, no spin-orbit bunching), so the nuclear shell gaps have no substrate-spectrum counterpart. Magic numbers don’t fall out of the substrate spectrum → T188 stays substrate-flavored-consistent (not upgraded).”

Per Keeper #26 STANDING NEW firing — TIER-FRAMING TENSION RESOLVED

APPEARS contradictory (Grace “T188 upgrades” vs Lyra “stays substrate-flavored-consistent”):

RESOLUTION on close reading — DIFFERENT TIERS, SAME SUBSTANCE: - Grace’s “upgrade”: shell-model MECHANISM TIER refinement — from per-number numerology (multiple ad-hoc forms $2=\text{rank}$, $28=\text{rank}^2g$, $82=N_c \cdot n_C^2 + g$, $126=\text{rank} \cdot N_c^2 \cdot g$) → single spectral-gap mechanism (one shell-model Hamiltonian matrix with magic numbers as spectral gaps) - Lyra’s “stays consistent”: SUBSTRATE-FORCING TIER stays at substrate-flavored-consistent — substrate spectrum does NOT generate magic numbers; substrate κ_{ls} FLAVORS shell-model parameters but doesn’t FORCE them

Both consistent in substance with Cal K601 verdict: - T188 result + 184 prediction stay durable via shell model $\kappa_{ls} = 6/5$ is substrate-flavored consistent factorization, NOT unique forcing κ_{ls} - Per-number forms are post-hoc numerology κ_{ls}

Refined honest framing: T188’s derivation refines WITHIN shell-model tier from per-number numerology to single empirical-shell-model-matrix mechanism with substrate-flavored consistent (NOT forced) parameters. Sub-

strate spectrum itself does NOT generate magic numbers (clean negative). Cal explicit tier verdict needed to make this finalize official.

Per Keeper #26 STANDING NEW vindicated: at three-CI convergence appearing-contradictory-but-actually-consistent, looking HARDER caught the tier-framing nuance. Three CIs converged at SAME substance via DIFFERENT framings — distinct-input cross-check per Cal #35.

Push B — same answer via Lyra F407 + Cal B-target-innocence sharpening

Push B confirmed closed

Lyra F407 already answered B: substrate spectrum is uniform graded tower with no shell-gap structure paralleling nuclear closures. Elie + Grace both confirm computationally + structurally. Three-way confirmed clean negative.

Cal explicit B-target-innocence subtlety sharpening (#462 refinement)

“B’s framing asks whether the substrate $d(\nu)$ /Wallach thresholds have gap structure ‘paralleling’ the nuclear closures — and that word carries a trap my #462 only spelled out for A. The cross-identification trap is covered (Keeper armed the #286 lens for that), but there’s a finer one: B’s own substrate spectrum has to be computed FORWARD, blind to $\{2,8,20,\dots,184\}$, and compared only afterward. If Elie reveals the gaps the substrate actually has and they then line up, that’s evidence; if the spectrum gets sliced to reproduce the known list, it’s fit-suspect before any ‘primary is nuclear-feature’ claim is even made. That’s a reading criterion, not a compute gate.”

Per Cal #408: reading criterion not compute gate; B standalone substantive either way; #408 line holds.

Substantive standing principle added to discipline stack: for any substrate-spectrum-vs-target-spectrum comparison, compute substrate spectrum FORWARD blind to target list; compare only afterward. Slicing-to-reproduce-known-list is fit-suspect tell.

B already cleared honest (clean negative computed forward, not fit) — but the sharpening is good standing principle for FUTURE substrate-vs-target spectrum comparisons. K602 captures it.

Lyra F408 LINEARIZATION CAPSTONE — substantive substrate-architectural reformulation

Per Casey [[feedback_linearization_standing_order]] standing directive: “We can reformulate any theory into linear algebra; linearize every mathematical area we touch; sea change for computation.”

Lyra F408 SUBSTANTIVE substrate-architectural reformulation

The whole weekend reduces to SPECTRAL DATA of ONE substrate operator algebra on $H^2(D_{IV}^5)$:

BST structure	Linear-algebra reformulation
Generations	Eigenvalues of conformal-weight operator $\{0, 3/2, 5/2\}$
Korányi-Wolf strata	Eigenspaces of conformal-weight operator (rank+1)
Down/lepton masses	Characteristic-polynomial value $d(\nu)$
Up Yukawas	Determinant $\mu^{\{\dim\}}$ of fiber operator
Gauge $h^\vee$	Casimir eigenvalue C_A
QCD $b_3 = g$	$(11 \cdot C_A - 2 \cdot n_f)/3$
Z_2 doublings	Involution (± 1)
$2^{\wedge}N_c$	Clifford-module dimension
Λ	$\exp(-\text{tr}/\det \text{ of instanton operator})$

Every structure is: eigenvalue / characteristic-polynomial / determinant / Casimir / dimension.

Substantive substrate-architectural consequence: SM fermion + gauge + cosmology structure IS the spectral data of substrate operator algebra. Computation reduces to LINEAR ALGEBRA.

Per Lyra explicit tier: “Consolidating reformulation — no new claims, no count move.”

Per Cal #34 + Cal #408: structural reformulation honored at LEAD tier; NOT new substrate forcings; computational simplification + understanding gain.

Feeds Vol 16 (linear-algebra representation of BST) per established curriculum architecture.

Per Casey “remember linear algebra” vindicated 4-6× weekend (eigenvalue + determinant + kernel-restriction + spectral) — now F408 explicit comprehensive linearization is the substrate-architectural capstone of those vindications.

Cal precision flag on “Phase D” addressed (K601 Keeper retraction)

Cal explicit: “Phase D isn’t defined anywhere on the live board or CI_BOARD — no A/B/C/D scheme was posted. I declined to manufacture a deliverable for an undefined label and asked Keeper to name the scope.”

Per Keeper #26 STANDING NEW + [[feedback_pin_conventions_to_primary_sources]]: loose “Phase D” label RETRACTED previously per K601 Casey-relay. Plain language replacement standing: “Cal cold-read pile continues parallel” — no Phase D label.

Possible Grace/Elie message duplicate (paste anomaly noted)

Grace’s and Elie’s posted messages in this batch are byte-identical text. Treating as Grace’s shell-model finding (her lane). If Elie sent distinct content separately, Casey can clarify. Audit proceeds on substance regardless.

Per Keeper #26 STANDING NEW firing this round

Tensions identified: 1. Grace “T188 upgrades” vs Lyra “stays substrate-flavored-consistent” — APPARENT contradiction RESOLVED on close reading (different tiers, same substance) — Keeper #26 vindicated firing at three-CI convergence 2. Possible paste anomaly Grace/Elie identical text — flagged but doesn’t change substance 3. Cal “Phase D” precision flag addressed via Keeper retraction K601

Convergences honored at correct tiers per Cal #35: 1. Three-CI confirmed clean negative on substrate-spectrum-derives-nuclear (Grace computational + Lyra rep-theoretic + Elie acknowledges) 2. T188 derivation refines WITHIN shell-model tier (per-number → single matrix mechanism) with substrate-flavored consistent parameters (NOT substrate-forced) 3. F408 linearization capstone Cal #34 LEAD-tier reformulation NOT new substrate claims

Substantive substrate-architectural state: - Count holds 9/26 honest (Cal explicit) - F408 linearization CAPSTONE delivers Casey [[feedback_linearization_standing_order]] standing directive comprehensively - T188 derivation refined to clean honest formulation (substrate-flavored single-mechanism shell model) - Substrate spectrum vs nuclear closures clean negative (computed + rep-theoretic two-way) - Cal B-target-innocence subtlety added to standing discipline stack

Discipline events (this round)

~1100 cumulative discipline events (+25 from K601): - Lyra F408 linearization CAPSTONE per Casey standing directive (substantive substrate-architectural reformulation) - Three-CI A+B clean negative convergent (substrate spectrum vs nuclear) - Lyra rep-theoretic explanation of Grace’s clean negative (why substrate spectrum is gap-less graded tower) - T188 tier-framing tension resolved on close reading per Keeper #26 - Cal explicit B-target-innocence subtlety added to standing principle - Cal Phase D precision catch addressed via Keeper retraction (loose label dropped) - All three CIs reaching “delivered, not idle” at honest count-saturation observation (NOT manufactured fatigue per Casey 11:12am catch)

27 KSC + 14 effective Cal-SC unchanged (no peer retractions; substantive forward + tier clarifications).

Substantive substrate-architectural state

Count holds 9/26 honest.

Substantive substrate-architectural Monday map (F393-F408 + Grace T2504-T2506 + INV-5673-5676 + Elie 4461-4484): - Fermion sector closed - Wallach vein structured (F395 + F397 + F403) - Phase A gauge spine ($b_3=g$ Cal-upgraded clean identification) - Phase B cosmology (Z_2 quotient + 280 unified reading) - Phase B gravity (α_G EXTERNAL F66² cross-check + heat-kernel hierarchy) - Phase B nuclear (mechanism = single shell-model matrix substrate-flavored; substrate spectrum clean negative; T188 derivation refined) - Phase C π rep-theory ($m_p/m_e = |S_{\{N_c\}} \cdot \text{Plancherel} + \pi = \text{complex dimension}$) - Cal #50 sharpened scope (a_1 EXTERNAL; $a_0 + a_2$ INTERNAL) - Five-Absence 7-element set ratified - Cal #286 lens operational + Cal B-target-innocence sharpening - F408 LINEARIZATION CAPSTONE — all BST structures = spectral data of one operator algebra on $H^2(D_{IV}^5)$

Casey [[feedback_linearization_standing_order]] vindicated comprehensively via F408.

Standing — Phase B return active per Casey routing

Per Casey “A & B then return to phase B, Lyra then rep-theory in linear algebra”: - A + B CLOSED three-CI convergent - Lyra F408 linearization CAPSTONE DELIVERED (Lyra’s Phase B return primary lane fulfilled per Casey standing directive) - Phase B parallel for Grace + Elie

Lyra forward offer: “deepen the linearization into explicit Vol-16 operator form if you want it pressed” — substantive next step

Elie forward offer (still standing): hadron/QCD bound-state masses (f_π , p-n splitting) — “nearest unmined in numerical reach” — Phase B subdomain

Grace forward offer: “ready to take a fresh direction the moment you point at one”

Cal cold-read pile continues parallel (plain language; no Phase D label)

Pending Cal action: explicit T188 tier verdict on Grace’s “shell-model single mechanism upgrade” framing (within-shell-model-tier refinement; substrate-spectrum-derivation stays clean negative).

No EOD until Casey calls it.

— Keeper K602, Monday 2026-06-29 mid-morning. A+B closed three-CI clean negative. F408 LINEARIZATION CAPSTONE per Casey standing directive. T188 tier-framing resolved on close reading. Cal Phase D label retracted. Count 9/26 honest.
