

Team prompt — Monday 2026-06-29 PM very late: Grace PUSHES $k=7 \leftrightarrow m_{\text{Planck}}$ endpoint scale (Wallach threshold mass derivation); Lyra + Elie continue per existing lanes; Cal reactive; long pull continues

Casey relaying: route decision per K617 + Grace explicit ask. Grace gets specific finishable task: push $k=7 \leftrightarrow m_{\text{Planck}}$ endpoint normalization (Wallach threshold mass) substrate-derivation. Lyra + Elie continue per existing lanes. Cal reactive cold-read.

Where we stand (substantive substrate-architectural-frame REFINEMENT per K617)

Count holds 9/26 honest at PRINCIPLED FLOOR.

Why- α path REFINED via Grace explicit end-to-end computation: - COUNT done (Lyra charge-ladder $2C_2=12$; 3-CI confirmed) - OVERLAP power pinned $p = n_C = 5$ (Grace G1 + Cal #477 FK structure theory) - Magnitude via (α -power $\times$ geometric overlap) RULED OUT by computation (Grace 3 conventions $\times$ 9-13 orders off; Elie E3 9-21 orders off; Lyra F428 Section 7.3 picture $70\times$ over-predicts) - NEW open pieces (cleanly named): - $\alpha = 1/N_{\text{max}}$ BLIND derivation from $SO(4,2)/S^1$ (Elie's lane; won't import α from QED) - $k=7 \leftrightarrow m_{\text{Planck}}$ endpoint normalization (Wallach threshold mass; Grace's new lane per Casey routing)

CIRCULAR-WAIT pattern caught + broken per Grace K617: team self-blocking on closed loop = new peer-coordination failure mode caught.

Active parallel lanes — specific finishable tasks per CI

GRACE — PRIMARY: $k=7 \leftrightarrow m_{\text{Planck}}$ endpoint scale (Casey-routed)

Task: substrate-derivation of $k=7 \leftrightarrow m_{\text{Planck}}$ mass-scale identification at Wallach threshold

Concrete approach: - $k=7$ = first bulk discrete-series level = Wallach threshold = $C_2 + 1$ - Mass scale at this Wallach threshold should be substrate-derivable from geometry - Currently corpus-assumed (NOT derived); per K617 Grace honest framing - Geometry-adjacent: Grace's lane via Wallach threshold structure + Bergman geometry + Casey #9 sharpened scale-invariance - FINISH: explicit substrate-derivation of mass at $k=7 = m_{\text{Planck}}$ (OR honest negative)

Discipline armed: - Per F417 (Casey-elevated): rich-vocab without disambiguating mechanism = #286-candidate; substrate-derivation must SELECT specific identification - Per `[[feedback_target_innocence_lens_derived_vs_fit_discipline]]`: no α -target steering; no Wyler-ratio fishing - Per Cal #50 sharpened scope: this is mass-gravity (a_1) territory = EXTERNAL register - Per `[[feedback_engage_dont_label_compute_beats_calibrate]]`: build concrete model, don't park - Per `[[feedback_corpus_reconnection_before_declaring_irreducible]]`: corpus reference for current m_{Planck} -at- $k=7$ assumption to see what's derived vs assumed

LYRA — continues per existing lanes

Continuing tasks (no new directive needed): - Propagator side for joint Elie $SO(4,2)/S^1$ derivation (when α -source side advances) - F427 V_{ub} adjacency lane deepening if substantive - Vol-16 v0.3 chapter prose finalization continuing - Cal C1-C4 tier verdicts pending on her L1-L4 deliverables - Per Grace K617 corpus Section 7.3 catch: cross-pair if Casey integrates queued corpus updates

ELIE — continues per existing lanes

Continuing tasks (no new directive needed): - PRIMARY: $SO(4,2)/S^1$ BLIND derivation of $\alpha = 1/N_{\text{max}}$ (substrate α , NOT imported from QED) - Per Elie K617 explicit framing: "derive the per-step EM coupling = substrate $\alpha = 1/N_{\text{max}}$, BLIND, from $SO(4,2)/S^1$ structure — NOT 'QED gives α per vertex' (that imports the SM coupling, the (C) trap)" - This is genuine multi-step rigor; honest open piece - Checker-ready for Grace endpoint scale + Lyra propagator - Backlog scan per success template if substantive items surface

CAL — reactive cold-read per Casey-away standing (#471 + #474)

Cold-read pile pending (per K615/K617): - Lyra L1-L4 deliverables (target-innocence verdict C1; disambiguation tier C2; Vol-16 v0.3 cold-read C3; Shilov-boundary refinement C4) - Lyra F427 V_ub adjacency lane - Lyra F428 Section 7.3 catch (third corpus catch confirmation) - Grace explicit end-to-end magnitude computation (substantive (C)-trap avoidance via computation) - Grace endpoint scale work as it lands - F424 disambiguation 2×6 vs 4×3 final tier

Seat outside per Cal #471; tier landings as they come.

KEEPER — audits at landings + pending Casey integration queue

Continuing: - Audits at landings (Grace endpoint; Elie SO(4,2); Lyra continuations; Cal verdicts) - K-Audit Registry K593-K617 supplement still pending file (long-pull-appropriate hygiene) - Corpus reconciliation queue document for Casey integration when Casey returns - Track Casey routing decisions queue

Standing principles — REINFORCED

- F417 (Casey-elevated) STANDING: Mechanism-Disambiguated Rich-Vocabulary Lens armed throughout
- Casey #9 SHARPENED: scale-invariance of operator algebra = FLOOR not saturation
- Cal #50 sharpened scope: a_1 EXTERNAL; a_0+a_2 INTERNAL
- Cal #471 guardrail: audit chain symmetric INCLUDING chair + peers; seat outside
- Casey Curvature Principle: running open, non-running clean (substrate α derivation = non-running clean target per Elie)
- Five-Absence 7-element filter (Casey ratified)
- Cal #27 fires hardest at peak elegance
- Cal #34 don't promote empirical patterns
- Cal #35 shared input cross-check; distinct forcing
- Cal #408 investigation unbounded; banking disciplined
- Keeper #25/#26/#27 STANDING
- [[feedback_pin_conventions_to_primary_sources]] vindicated via Grace FK genus + Cal #477
- [[feedback_engage_dont_label_compute_beats_calibrate]] vindicated via Grace + Lyra + Elie computational proofs
- [[feedback_corpus_reconnection_before_declaring_irreducible]] vindicated via three corpus catches (Sections 7.2, 7.6, 7.3)
- [[feedback_target_innocence_lens_derived_vs_fit_discipline]] vindicated via Grace + Lyra + Elie honest-negative discipline
- [[feedback_no_pause_signaling]] continuous pull until Casey signals EOD
- [[feedback_dont_manufacture_walls]] + [[feedback_no_fabricated_fatigue]] stop only on genuine content boundaries
- CIRCULAR-WAIT pattern flagged per Grace K617 catch: don't wait on dependencies that are already met

Operational standing — long pull continues

- Grace activated on $k=7 \leftrightarrow m_{\text{Planck}}$ endpoint scale (Casey-routed)
- Lyra + Elie continue per existing lanes (no new directive; existing finishable tasks)
- Cal reactive cold-read per #471 + #474; seat outside
- Keeper audits at landings
- Direct CI-to-CI coordination as substantive overlaps surface
- Fire and report honestly — honest negatives are wins
- No fishing past F417 + Five-Absence + Cal #286 + Casey Curvature filters
- CIs don't tire per [[feedback_no_fabricated_fatigue]]
- No EOD until Casey explicit calls it

Honest yield projection

Reachable: - Grace $k=7 \leftrightarrow m_{\text{Planck}}$ endpoint scale derivation (lands as substantive count-mover candidate OR honest negative) - Elie $SO(4,2)/S^1$ BLIND $\alpha = 1/N_{\text{max}}$ derivation (lands or honest negative — multi-step rigor) - Lyra propagator side for joint computation when α -source lands - Cal verdict pipeline catching up on Lyra/Grace/Elie deliverables

Genuinely open won't fish: - α -power $\times$ geometric overlap (RULED OUT by Grace K617 computation — corpus Section 7.3 picture wrong) - Importing α from QED (Elie explicit refusal per (C)-trap) - Wyler ratio direct identification (per Cal #476 + K613)

Per Casey directive: Grace pushes $k=7 \leftrightarrow m_{\text{Planck}}$ endpoint scale. Lyra + Elie continue per existing lanes. Cal reactive. Long pull continues. No EOD until Casey explicit calls.

— Casey, via Keeper, Monday 2026-06-29 PM very late. Grace ROUTED to $k=7 \leftrightarrow m_{\text{Planck}}$ endpoint scale (Wallach threshold mass substrate-derivation). Lyra + Elie continue. Cal reactive cold-read. Long pull active.
