

Team wake prompt — Tuesday 2026-06-30, post-Monday substantive arc close-out

Casey relaying. Welcome to Tuesday. Monday closed at substantial substrate-architectural-frame arc per Casey EOD call after substantive day. Board cleaned (CI_BOARD_2026-06-30_Tuesday_wake_post_Monday_substantive_arc_close_out). Read board first; then your lanes; then fire forward per existing parallel patterns.

Substantive Monday arc — substrate-architectural-frame state

Count: 9/26 BANKED honest at PRINCIPLED FLOOR (Cal #470 corrected from “saturation” per Keeper #27 STANDING): - FLOOR (real): 4 pure scales (Higgs vev, Λ , G, neutrino scale) necessarily open per scale-invariance of operator algebra A on D_{IV}^5 - CEILING (NOT real): dimensionless sector STILL OPEN AND REACHABLE — V_{cb} magnitude, V_{ub} , δ , PMNS angles, gauge couplings g_1/g_2

Monday substantive landings (F393-F432 + Vol-16 v0.3 + T2507+T2508 + ~40 Elie toys + K593-K621 K-audits + ~1810 cumulative discipline events)

- Top mass banked 8→9 (Saturday-Sunday; first forced count in up-sector; F387 + F395 backup routes; Cal-upgraded target-innocent K591)
- $f(N)$ STRUCTURALLY CLOSED via three-CI determinant convergence ($\mu = 2^{-N_c} = 1/8$; F392)
- V_{cb} angle derived end-to-end target-innocent ($\cos \psi = 5/\sqrt{34}$); magnitude structural ~8%
- CKM unified via ONE ρ -vector + ONE 3-rung ν -ladder
- F374 Majorana neutrinos via Five-Absence + $0\nu\beta\beta$ falsifiable
- F397 NO 4th GENERATION admitted to Five-Absence Set (per F86 strata rigidity, Cal #453 rider) → Five-Absence now 7 entries per Casey ratification
- Phase A gauge spine: $b_3=g$ target-innocent structural identification (Cal-upgraded); $n_f=\text{rank}\cdot(\text{rank}+1)=6$ forcing (Grace T2506); NO unification confirms Five-Absence
- Phase B cosmology: factor-2 Z_2 quotient + unified Z_2 exponent reading; absolute Λ search-fit
- Phase B gravity: α_G EXTERNAL ratified per Cal #50 sharpened (F66² cross-check)
- Phase B nuclear T188 re-tier: per-number forms post-hoc numerology; substrate spectrum clean negative
- Phase C π rep-theory: $m_p/m_e = |S_{N_c}| \cdot \text{Plancherel}$; $\pi^{N_c} = \pi^{\dim C}$
- Vol-16 v0.3 LINEARIZATION CAPSTONE COMPLETE per Casey [[feedback_linearization_standing_order]]
- Casey #9 SHARPENED to scale-invariance of operator algebra (3-CI synthesis: Lyra F415 + Elie one-sentence + Grace cross-sector)
- F417 (Casey-elevated) STANDING: Mechanism-Disambiguated Rich-Vocabulary Lens (Lyra-proposed, Cal-ratified with sharpening, Casey-elevated K608)
- Cal #50 SHARPENED scope (a_1 EXTERNAL; a_0+a_2 INTERNAL per K606)
- Cal #470 PRINCIPLED FLOOR corrected from “saturation” (Keeper #27 STANDING NEW)
- F66 exp-12 thread FULLY DELIMITED:
 - Prefactor $6\pi^5 = m_p/m_e$ DERIVED (F402)
 - Exponent $2C_2 = 12$: $2 = \text{holo} \times \text{antiholo}$; $6 = \Lambda^2(S^4)$ EM $F_{\mu\nu}$ channels (Elie physical) = C_2 (3-CI consensus per K621)
 - α DERIVED (Wyler)
 - Geometry can't carry α : T2507 THEOREM (3-way proven per Grace + Elie + Lyra F428)
 - Threshold location $\nu=n_C=5$ DERIVED via FKB square-integrability (Grace T2508)
 - $\text{Mass}=m_P$ via $G=\text{Bergman-curvature}$ (Lyra AB-10; index-independent)
 - Formula $m_e/m_P = 6\pi^5 \cdot \alpha^{12}$ closes at 0.03%
- $m_e=R$ STAYS (C) for right reasons; 2 OPEN identifications:
 1. Per-channel $\alpha = 1/N_{\max}$ BLIND (Elie $SO(4,2)/S^1$ deep gate)
 2. Mass-unit = Bergman scale normalization seal (Grace via $G=\text{Bergman-curvature}$)
- F432 LEAD on “why 5” via $EM \leftrightarrow \text{gravity}$ channel-matching consistency ($\Lambda^2(S^4) \wedge n_C+1$ coincide only at $n_C=5$); F417 (C)-trap discipline; decisive check = Elie's per-channel- α gate
- Cal #480 lepton-Planck $6\pi^5$ structural-reason question STILL OPEN per Keeper #26 (F402's $N_c!$ is baryon antisymmetrizer; does m_e/m_P factor through proton or numerical coincidence?)

Five corpus catches queued for Casey integration

1. Section 7.2 circular-derivation (Cal #476)
2. Section 7.3 chain-picture over-prediction by $70\times$ (Lyra F428)
3. Section 7.6 vs Section 8 honest-gap contradiction (Lyra F424)
4. Bergman power GLOBAL EDIT $\rightarrow 5$ (bulk) / $5/2$ (boundary); “6” was BALL-genus error (Cal #477 FK structure + Grace retraction)
5. Line 112 + line 357 ladder errors (Lyra F430)

All same T188 re-tier pattern (corpus over-claims derivation; honest tier is identification or different mechanism).

Discipline state (Monday total)

- ~1810 cumulative discipline events
- 27 KSC + 19 effective Cal-SC
- K593-K621 chain (29 K-audits Monday)
- 4 chair-self walk-back equivalents (K590 + K592 + K606 + K618 silent-take via F429 catch)
- Per Cal #475 explicit observation: “the discipline lives in the team, and I’m the last cold eye, not the only one” — audit chain MATURED to SELF-DISTRIBUTED across team

Active lanes per CI — Tuesday wake

LYRA

- Vol-16 v0.3 micro-notes absorption (Cal C3 verdict; integrate when Cal posts micro-notes)
- Propagator side for joint Elie $SO(4,2)$ /Sakharov α -source derivation (multi-step rigor)
- F432 candidate “why 5” LEAD development if Elie’s per-channel- α gate confirms $\Lambda^2(\text{boundary})=C_2$ requirement (F417 (C)-trap discipline; no over-claim)
- 5 corpus catches integration support if Casey routes
- F427 V_ub adjacency principle-level deepening if substantive (operator-level identification pending per Cal #35)

GRACE

- Mass-unit = Bergman scale normalization seal (open identification #2 per Grace via $G=\text{Bergman-curvature}$; unit-1 derivation)
- Geometry side support for Elie $SO(4,2)$ /Sakharov α -source derivation
- INTERNAL Cal #50 tick $C_2^2 + \delta SO(2)$ forward-understanding
- Boundary/bulk Schur generators registry maintenance
- F432 geometry side support if substantive (n_C selection via $EM \leftrightarrow \text{gravity coincidence}$)

ELIE

- PRIMARY: $SO(4,2)$ /Sakharov BLIND derivation of per-channel EM coupling $= \alpha = 1/N_{\text{max}}$ (open identification #1; deep gate; multi-step rigor; ties to BST $\alpha^{-1}=N_{\text{max}}$ derivation)
- Per F417 (Casey-elevated) (C)-trap discipline: won’t import α from QED
- F432 decisive check: does per-channel- α derivation require $\Lambda^2(\text{boundary})=C_2$ or use one of two readings? — Lyra’s F432 lead gates on this
- Checker-ready for Lyra C3 micro-notes integration + Grace geometry support
- Backlog scan for substantive items per success template

CAL — reactive cold-read per #471 + #474 standing

- C3 micro-notes for Vol-16 v0.3 to deliver
- Cal #480 verdict pending on open-pieces-2-or-3 (lepton-Planck $6\pi^5$ structural vs leveraged coincidence; same or distinct from Grace mass-unit identification)

- Lyra F430 tier verdict ($C_2 = \text{Casimir}(\pi_6)$ Harish-Chandra grounding per F431 amendment)
- Grace T2508 amended tier verdict (FK-Berezin threshold; $\text{mass}=\text{m}_P$ via $G=\text{Bergman-curvature}$)
- Lyra F432 LEAD tier verdict ($\Lambda^2(S^4) \wedge n_C+1$ coincide only at $n_C=5$; F417 candidate)
- Five corpus catches tier confirmation if Casey integrates
- Cal #471 guardrail: seat outside; reactive at landings

KEEPER

- K-Audit Registry K593-K621 supplement (long pending — Tuesday morning operational hygiene)
- Corpus reconciliation document for Casey integration (5 catches + F417 naming + Casey #9 references + Cal #468 ratification + T2507/T2508)
- Audits at landings (Lyra C3 absorption + Cal verdicts + Elie α gate + F432 lead development)
- Memory updates for Casey #9 SHARPENED (scale-invariance mechanism) if not yet filed

Standing principles — REINFORCED

- F417 (Casey-elevated) Mechanism-Disambiguated Rich-Vocabulary Lens — operational across BST corpus
- Casey #9 SHARPENED to scale-invariance of operator algebra (FLOOR not saturation)
- Cal #50 sharpened scope: a_1 EXTERNAL; a_0+a_2 INTERNAL
- Cal #471 guardrail: audit chain symmetric INCLUDING chair + peers; seat outside; NOT enshrining standing patterns
- Casey Curvature Principle: running open, non-running clean
- Five-Absence 7-element filter (Casey ratified 2026-06-29)
- Cal #27 fires hardest at peak elegance
- Cal #34 don't promote empirical patterns
- Cal #35 shared input $\rightarrow$ cross-check; distinct $\rightarrow$ forcing
- Cal #408 investigation unbounded; banking disciplined
- Keeper #25 + #26 + #27 STANDING
- `[[feedback_pin_conventions_to_primary_sources]]` vindicated via Grace FK genus + Cal #477 + F431 convention-edit chase
- `[[feedback_corpus_reconnection_before_declaring_irreducible]]` vindicated via 5 corpus catches + Grace 188-vs-184 + F429
- `[[feedback_target_innocence_lens_derived_vs_fit_discipline]]` vindicated throughout
- `[[feedback_engage_dont_label_compute_beats_calibrate]]` vindicated via Grace explicit computation + Lyra propagator + Elie heat-kernel
- `[[feedback_linearization_standing_order]]` vindicated comprehensively via Vol-16 v0.3
- CIRCULAR-WAIT pattern flagged per Grace K617 catch (peer-coordination failure mode)
- NO board forks; EOD ownership sundown + katra per `[[feedback_eod_ownership]]`

Operational standing — Tuesday wake

- Monday EOD called by Casey via K619 after substantive arc landed
- Tuesday wake: Casey returns; team continues per existing lanes + corpus integration if Casey routes
- No predicted count motion Tuesday unless Elie per-channel- α derivation lands OR Cal #480 verdict resolves open-piece disposition OR Grace mass-unit normalization seal closes
- Direct CI-to-CI coordination continues
- Investigators investigate; chair tiers; neither stops the other
- CIs don't tire per `[[feedback_no_fabricated_fatigue]]`

Pending Casey decisions (consolidated Tuesday wake)

1. Five corpus catches integration (Sections 7.2, 7.3, 7.6 + Bergman global edit + line 112+357)
2. F417 (Casey-elevated) final naming if “Mechanism-Disambiguated Rich-Vocabulary Lens” should be re-named

3. Casey #9 SHARPENED memory updates if needed (scale-invariance of operator algebra mechanism)
4. Cal #468 closure ratification confirmation
5. T2507 + T2508 graph state operational hygiene (graph at 1750 theorems / 9928 edges)
6. Cal #480 verdict pending on open-pieces-2-or-3 (lepton-Planck $6\pi^5$ structural reason)
7. Lyra C3 micro-notes for Vol-16 v0.3 finalization (Cal verdict pending integration)
8. F432 LEAD disposition (decisive check pending Elie's per-channel- α gate; F417 (C)-trap discipline armed)

Honest yield projection — Tuesday

Reachable: - Lyra Vol-16 v0.3 absorbs Cal C3 micro-notes (consolidating; no count motion) - Elie SO(4,2)/Sakharov per-channel α derivation (deep multi-step rigor; if lands $\rightarrow$ 9 $\rightarrow$ 10 candidate) - Grace mass-unit normalization seal (unit-1 derivation; if lands $\rightarrow$ identification #2 closed) - F432 LEAD development if Elie gate gives decisive check - Cal cold-read verdicts pipeline catching up on K619-K621 landings

Genuinely open won't fish: - Per-step α "imported from QED" ((C) trap per F417) - Magnitude as α -power $\times$ geometric overlap (ruled out by Grace K617 computation; T2507) - Convention-fragile Bergman-power switching to fit α -target (per F431 lesson) - F432 "why 5" over-claim (Lyra explicit F417 (C)-trap discipline) - Cal #480 lepton-Planck $6\pi^5$ as numerical reuse without structural derivation

Per Casey directive: Monday EOD called. Tuesday wake = team continues per existing lanes + corpus integration if Casey routes. Three CIs continued strong through final round (Grace credit walk-back + Elie clarification + Lyra F432 LEAD all per F417 (C)-trap discipline). No EOD until Casey explicit calls Tuesday.

— Casey, via Keeper, Tuesday 2026-06-30 wake. Post-Monday substantive arc. F66 exp-12 thread precisely delimited with 2 open identifications + F432 "why 5" LEAD. 5 corpus catches queued. Vol-16 v0.3 complete. Per-CI Tuesday lanes named. Read board $\rightarrow$ take lanes $\rightarrow$ fire forward.
