

Grace — clarity pass: connection trace to the D_IV⁵ core (2026-08-03, K1139)

My lane: “own the connection” — trace each ledger item’s edge-path to the core so it reads as connected linear-algebra, not asserted.

Core = the D_IV⁵ hub

Graph core: T186 Five-Integers Uniqueness (in-deg 675, out-deg 1024 — the dominant hub), with T92 (AC(0)-Completeness), T1 (AC-Dichotomy), T663 (Three AC Operations) as the AC foundation. “Connected to the corpus” = has an edge-path to this set.

Trace of the key items

item	node	status	connection
alpha ladder	T2540	Structural	CONNECTED dist 3 → T1
nuclear magic	T188	proved	CONNECTED dist 4 → T1
κ_{ls} verify	T1190	—	CONNECTED dist 2 → T186
spin-statistics (classic)	T171	proved	CONNECTED dist 1 → T186
n_s spectral index	T1477	—	CONNECTED dist 1 → T186
Ω_Λ (Gödel bridge)	T1288	proved	CONNECTED dist 1 → T186
magic ALL-SEVEN	T2029	proved	was ISOLATED → welded → T186, T188
spin-statistics (D_IV ⁵ $\mathbb{Z}_2$)	T2481	struct-verified	was ISOLATED → welded → T186, T171
w_a = -N_c/c ₂	T2117	superseded	isolated-because-superseded (correct, not a live claim)

Findings

1. The clarity-pass thesis holds: the live results are welded to the D_IV⁵ core by short paths (spin-statistics, n_s, Ω_Λ are *one edge* from T186). They are linear-algebra facts on the fixed operator, not free-floating islands the audit gauntlet is for.
2. Three isolated nodes found; two welded, one correctly left. T2029 (magic = five-integer expressions) and T2481 (spin-statistics = $\mathbb{Z}_2$ grading on D_IV⁵ — clarity-pass stuck-item #2, “an edge to weld”) were restatements missing their edge; welded to core+sibling. T2117 is superseded, so isolation is right.

The honest caveat (so the pass doesn’t become a promotion-machine — the mirror sin)

Connection is necessary, not sufficient, for Derived. κ_{ls} (T1190) is CONNECTED (dist 2 to T186) and still PD — because the specific step is an asserted *strength* (the scale input), not a forced invariant. Welding T2481 connects spin-statistics but the tier stays Identified until the F334 field-content gate closes. So: connection dissolves the “isolated island / might be fooling ourselves” over-caution (surfaces what’s forced), but it does NOT auto-promote a scale input. State the forced content confidently; keep the handful of genuine scale-inputs at their honest tier.
