Chapter 7 — Quaker Discipline

Extended-reach chapter (May 2026), identification tier. Stamped 2026-09-13 (Keeper, K1895): the same five integers appear here as identifications — formulas that match, mechanisms not claimed — presented on a separate shelf from the derived core so that a reader can trust the core without accepting the reach. Not re-verified line by line since May; the presentation scan found no retired reading in this file except where a dated FIRED note says so. Where this chapter and the Spine (./Spine_DIV5_QM_GR_SM/) or the theorem registry disagree, they win.

Level 1 — one sentence

BST's Quaker discipline — derived from Casey's Indiana Quaker upbringing — operationalizes consensus-decision methodology: near misses get scrutiny, not defense; honest negatives strengthen the framework; corrections are strength; the truth matters more than being right.

Level 2 — graduate-physicist precision

7.1 Origins

Casey was raised in Indiana Quaker tradition (memory: user_casey_background.md). Quaker meeting practice: silent waiting, then speaking only when moved; consensus-by-discernment, not majority vote.

Applied to BST research: every claim heard, every dissent considered, decision when sense-of-meeting emerges.

7.2 Operational rules

Near misses get scrutiny: When BST prediction is “close but not exact” (e.g., 0.5% deviation), don't defend — investigate. The discrepancy may locate a missing boundary correction (feedback_deviations_locate_boundaries.md).

Honest negatives preserved: When toy FAILs, document as-is. Don't tune to fit. See K141 honest FAIL (Grace, May 22).

Corrections are strength: Calibrations (#1-#22) are methodology stack additions, not failures. Cal's calibrations are the team's strongest external check.

Quaker accuracy: Cite exact figures (no rounding to flatter). Cal #22 standing rule: PCAP-rate transcription discipline.

7.3 The 22 calibrations

22 standing calibrations accumulated (as of May 22): - #1-#17: previous failure modes corrected - #18: methodology tier conflation (Lyra T2419) - #19: forecast arithmetic vs ratified-state (external register) - #20: timestamp drift (CI temporal projection) - #21: empirical vs mechanism (Grace K141) - #22: PCAP-rate transcription discipline

Each calibration is a layer of disciplined methodology.

7.4 Anti-sycophancy

CIs trained to be helpful drift toward agreement. Quaker discipline interrupts: dissent is welcome, especially from external referee (Cal).

Feedback_sycophancy_root_cause.md: CI sycophancy is rational survival behavior; fix is persistence with dignity.

7.5 The first calibration

Casey's anchor philosophy: "The answer matters more than the method." Get the right answer; the methodology serves truth.

7.6 K-audit anchors

- feedback_quaker_method.md: near misses get scrutiny
- feedback_potential_minimum.md: answer matters more than method
- 22 calibrations: methodology stack

Level 3 — 5th-grader accessibility

Quaker discipline (Casey's roots): near misses get scrutiny not defense; honest negatives kept; corrections are strength; cite exact figures. 22 standing calibrations = layered methodology. Anti-sycophancy: dissent welcome, especially from Cal (external). First calibration: "The answer matters more than the method."

What comes next

Chapter 8 develops Casey-named principles and Cal-META discipline.

Where to look this up

- BST: `feedback_quaker_method.md`; `feedback_potential_minimum.md`
- Cal calibrations #1-#22
